Valve cross sections

Based on decades of experience in the field of high pressure technology MAXIMATOR manufactures valves and fittings for the oil and gas industry, chemical and petrochemical industry, water-jet cutting, power systems and test bench manufacture.

Products for Sour Gas Applications
Pipe Valves
to 15,200 psi (1,050 bar)

Adapters and Couplings
Medium Pressure
to 22,500 psi (1,550 bar)

Accessories
High Pressure
to 65,000 psi (4,500 bar)

Tools
Ultra High Pressure
to 152,000 psi (10,500 bar)

Valve Actuators

Customized Solutions
Ball Valves
to 21,000 psi (1,500 bar)

State-of-the-art technical know-how based on German engineering, successful system developer and experienced specialist - MAXIMATOR GmbH is a leading supplier of high pressure and testing technology, hydraulic and pneumatic equipments. Qualified and motivated company members are developing, designing, manufacturing and marketing products internationally which are worldwide employed in process technology plants. At its headquarter in Nordhausen MAXIMATOR GmbH develops, designs and manufactures high pressure equipment.

In our purposefully-built development and service centre in Nordhausen MAXIMATOR offers custom-tailored services such as pressure, bursting and impulse pressure tests plus component autofrettage.

A modern manufacturing operation has been established at our Nordhausen factory. The plant complies, especially in the high-pressure area, with all requirements to ultra-clean production and thus ensures highest fabrication and quality standards.

The MAXIMATOR team is highly qualified and experienced in high-pressure technologies. Following final inspection the components are shrink wrapped which guarantee dust-free delivery to their destinations.

Our work is based on a verified and certified quality management system (DIN EN ISO 9001) - the fundamental asset for implementing technological knowledge successfully and experience in the field of complex systems.

Further sales offices of the company across Germany and partner firms around the world provide fast-tracked individual system solutions, inter alia for valves, fittings and tubings, air-driven fluid pumps, air amplifiers and gas compressors, hydraulic units, test rigs and pressure generating units as well as gas-assisted and water-assisted systems.

Our efficient in-house service department carries out erection, installation and maintenance of components and systems manufactured by MAXIMATOR.

Continuous marking ensures proper traceability of all MAXIMATOR Valves and Fittings. Following product relevant datas are marked by a sophisticated laser device.

Valves, Fittings and Tubing

» Table of Contents

MAXIMATOR has been designing and manufacturing high pressure equipment for more than thirty years and has a worldwide reputation for quality and reliability, backed by one of the best service organizations in the industry.

Pipe Valves and Fittings to 15,200 psi (1,050 bar)

MAXIMATOR offers a complete line of pipe fittings, pipe hex nipples, pipe check valves and pipe line filters. All pipe valves use the NPT and BSP connection, fittings use the NPT connection.

» Sizes 1/4, 3/8, 1/2, 3/4 and 1 inch NPT Connection

Medium Pressure to 22,500 psi (1,550 bar)

A complete line of medium pressure valves, fittings, tubing, check valves, line filters, angle filters, anti-vibration fittings and safety head assemblies are available through our catalog.

» Sizes 1/4, 3/8, 9/16, 3/4, 1 and 1 1/2 inch Medium Pressure Connection

High Pressure to 65,000 psi (4,500 bar)

Whatever your high pressure needs, MAXIMATOR is the source. We supply a complete line of high pressure valves, fittings, tubing, check valves, line filters, angle filters, anti-vibration fittings and safety head assemblies.

» Sizes 1/4, 3/8 and 9/16 inch High Pressure Connection, 1" Medium Pressure Connection (43,000 psi)

Ultra High Pressure to 152,000 psi (10,500 bar)

In addition to our medium and high pressure lines, we are proud to offer a complete line of ultra high pressure valves, fittings and tubing.

» Size 1/4, 3/8 and 9/16 High Pressure Connection (up to 101,000 psi); 5/16 inch Ultra High Pressure Connection

Valve Actuators

Piston type, air operated, valve actuators are also available from MAXIMATOR. They are mounted on a standard manual valve to provide remote control capability. There are different air to open and air to close actuators available, and selection is based on the valve size, system pressure, and air pressure available.

Ball Valves to 21,000 psi (1,500 bar)

MAXIMATOR offers ball valves of exceptional quality and performance with a variety of valve styles and process connections. Please consult the Valves, Fittings & Tubing catalog for availability.

» 2-Way Ball Valves- 1/4" up to 1/2" Orifice, 3-Way Ball Valves- 3/16" up to 1/2" Orifice, Pneumatic and Electric Actuators

Couplings and Adapters

Joining two different sizes and/or types of connections is easy with the couplings and adapters offered by MAXIMATOR. Now a variety of size combinations are possible!

Tools & Installation

Precise tools are necessary for manually coning and threading tubing. MAXIMATOR offers these tools, allowing for the coning and threading of medium and high pressure tubing up to 9/16" O.D.

This Catalog Part Number Generator is to be used as a reference guide only. Use the respective catalog pages for clarification. The following examples intend to explain the use of this part number generator.

Needle Valves:

- Standard Needle Valve for 22.500 psi with 1/4" medium pressure connection and non rotating vee stem design as two-way straight version:

21 V 4M 07 1

- Special Needle Valve for 30.000 psi with 1/4" high pressure connection and one piece rotating stem design as two-way straight version for Sour Gas applications:

30 V 4H 01 1 -SOG

- High pressure Needle Valve for 65.000 psi with 9/16" high pressure connection and non rotating vee stem design as three-way two on pressure version for high temperature applications:

65 V 9H 07 3 -HT

- Standard medium pressure Needle Valve for 22.500 psi with 9/16" medium pressure connection and non rotating vee stem design as two-way straight version with medium duty air actuator normally open (max. working pressure 10.000 psi - please refer to chapter 5 Valve Actuators for further information):

21 V 9M 07 1 -YMNO

Ball Valves:

- Medium pressure 2-way Ball Valve with 1/4" orifice diameter for 21.000 psi with 3/8" medium pressure connection:

21 B2 4 6M

- Medium pressure 3-way Switching Ball Valve with 3/8" orifice diameter for 15.200 psi with 1/2" BSP connection:

15 B3S 6 8B

Ball Valves

to 21,000 psi (1,500 bar)

Stem Type (only required on needle valves)	Body Pattern (only required on needle valves)	Connection "B" Size Type	Options
00 = Vee Stem one piece rotating	1 = Two-way straight	If different from Connection "A"	AVA = Anti-Vibration Collet Gland Assembly
01 = Regulating Stem one piece rotating	2 = Two-way angle		B = Cryogenic Packing (-100°F)
07 = Vee Stem non rotating	3 = Three-way, two on pressure		DA = Ball Valve Actuator (Pneumatic Double Acting)
08 = Regulating Stem non rotating	4 = Three-way, one on pressure		EAL = Electric Ball Valve Actuator (12 Volts AC or DC)
80 = Vee Stem one piece rotating / replaceable seat	5 = Three-way, two stem manifold		EAH = Electric Ball Valve Actuator (24-240 Volts AC or DC)
81 = Regulating Stem one piece rotating / replaceable seat			GY = Graphite Braided Yarn Packing (800°F)
87 = Vee Stem with replaceable seat non rotating			HT = High Temperature Option (1200°F)
88 = Regulating Stem w / replaceable seat non rotating			LT = Low Temperature Option (-423°F)
			O2* = Oxygen Service
			PM = Panel Mount Option for Needle Valves
			SA = Ball Valve Actuator (Pneumatic Single Acting)
			SOG = Sour Gas Service
			SSPG = Stainless Steel Packing Gland
			TG = Teflon Glass Packing (600°F)
			WO = Without Collars & Glands
			WOC = Without Coating
			YHNC = Heavy Duty Air Actuators, Normally Closed
			YHNO = Heavy Duty Air Actuators, Normally Open
			YMNC = Medium Duty Air Actuators, Normally Closed
			YMNO = Medium Duty Air Actuators, Normally Open
			2P = Two Piece Component

3. Medium pressure 3-way Diverter Ball Valve with 1/2" orifice diameter for 10.000 psi with 3/4" medium pressure connection and Electric Ball Valve Actuator (24-240 Volts AC):

10 B3D 8 12M -EAH

Adapter:

1. High pressure male to female adapter for 65.000 psi with Connection A: 9/16" high pressure male connection to Connection B: 1/4" high pressure female connection:

65 A 9H 4H

2. High pressure male to male adapter for 30.000 psi with Connection A: 1/4" high pressure male connection to Connection B: 3/8" high pressure male connection for Sour Gas applications:

30 M 4H 6H -SOG

*Please consult factory

3. Medium pressure Coupling for 15.200 psi with Connection A: 3/8" medium pressure female connection to Connection B: 1/2" BSP female connection:

15 F 6M 8B

Fittings:

1. Medium pressure Cross-Piece for 22.500 psi with 1/4" medium pressure connection including Collar and Gland:

21 X 4M

2. High pressure T-Piece for 65.000 psi with 9/16" high pressure connection including Anti-Vibration Collet Gland Assembly:

65 T 9H -AVA

Pipe Valves, Fittings and Nipples

» Pressures to 15,200 psi (1,050 bar)

MAXIMATOR has been designing and manufacturing high pressure equipment for more than thirty years and has a worldwide reputation for quality and reliability, backed by one of the best service organizations in the industry.

Pipe Valves, Fittings and Nipple feature:

- Rising stem design.
- 316 L (1.4404) wetted parts and 17-4 PH Stem for excellent corrosion resistance.
- Metal-to-metal seating achieves bubble-tight shut-off, longer stem and seat life, greater durability for repeated open and close cycles.
- PTFE and carbon packing with metal back-up rings offers reliable stem to body sealing.
- Non-rotating stem prevents stem to seat galling.
- Stem sleeve and packing gland materials have been selected to achieve optimum thread cycle life and reduced handle torque. All stem sleeve threads are rolled, assuring smooth operation.
- Two different valve body patterns, with choice of vee or regulating type stem tip.

MAXIMATOR offers a complete line of pipe fittings, pipe hex nipples, pipe check valves and pipe line filters. All pipe valves use the NPT and BSP connection, fittings use the NPT connection.

Note: When selecting multiple items, the pressure rating would be that of the lowest rated component.

Pipe valves

Maximator Pipe valves with metal to metal seats have a high level of safety and reliability under adverse operating conditions. These valves may be used both with gases and liquids.

Traceability is ensured through extensively documented data (batch number, maximum pressure, material number, type designation).

15 V Valve Series	4B Thread Size	07 Stem Type	1 Body Pattern	Options
15 V	4B – 1/4" BSP	07 – non-rotating VEE stem	1 – two-way straight	Extreme temperature option, see information below.

Options for Pipe Valves

Special Designs for Extreme Temperatures

Standard valves are supplied with Teflon / Carbon packing and may be operated to 450°F (230°C). High temperature packing and / or extended stuffing box are available for service from -423°F to 1200°F (-252°C to 650°C) by adding the following suffixes to catalog order number.

- **TG** – standard valve with teflon glass packing to 600°F (315°C).

- **GY** – standard valve with graphite braided yarn packing to 800°F (425°C).
- **HT** – extended stuffing box valve with graphite braided yarn packing to 1200°F (650°C).
- **B** – standard valve with cryogenic trim materials and Teflon packing to -100°F (-73°C).
- **LT** – extended stuffing box valve with teflon packing and cryogenic trim materials to -423°F (-252°C).

O.D. Size in.	Connec- tion Type	Orifice Size in. (mm)	Rated Cv**	Pressure Rating @ R.T. psi (bar)***
1/4	4B/4P	0.201 (5.1)	0.75	15,200 (1,050)
3/8	6B/6P	0.312 (7.9)	1.30	15,200 (1,050)
1/2	8B/8P	0.312 (7.9)	1.30	15,200 (1,050)
3/4	12B/12P	0.687 (17.4)	5.20	15,200 (1,050)
1	16B/16P	0.687 (17.4)	5.20	15,200 (1,050)

Consult your MAXIMATOR representative for **repair kits** and valve bodies. Refer to the Technical Section for proper maintenance procedures.

Maximator recommends pipe connections, sealed with PTFE-Tape, be operated between 1°F (-17°C) and 450°F (230°C). By use anaerobic sealants follow the instruction of the Sealant-Manufacturer

* tapered tip for regulating and shutoff

** Cv values shown are for 2-way straight pattern vee stem valves. For 2-way angle patterns, increase the Cv value by 50%. For Flow coefficient reference curves, please refer to chapter Technical Informations.

*** See page 2 in the Technical Section for Pressure/Temperature Rating Chart.

All technical and dimensional information subject to change. All general Terms and Conditions of sale, including limitations of our liability, apply to all products and services sold.

Pipe Fittings

» Pressures to 15,200 psi (1,050 bar)

Pipe Fittings

Maximator Pipe Fittings are designed for liquid and gas applications. The P Series Fittings are available from 1/4" to 1" NPT to 15,200 psi (1,050 bar).

NPT threads must be sealed using a high quality PTFE tape and/or paste product. Sealing performance may vary based on many factors such as pressure, temperature, media, thread quality, thread material, proper thread engagement and proper use of thread sealant.

MAXIMATOR recommends to limit the number of times an NPT fitting is assembled and disassembled because thread deformation during assembly will result in deteriorating seal quality over time.

Pipe O-Ring Check Valves

» Pressures to 15,200 psi (1,050 bar)

Pipe O-Ring Check Valves

Maximator Pipe O-Ring Check Valves provide high quality directional flow control and bubble tight shut-off for liquids and gases. These check valves are not to be used as a relief device. The opening pressure of the O-Ring Check Valves is approx. 20 psi (1.5 bar).

» **Materials:**

Body, cover, poppet, cover gland: 316 stainless steel

Spring: 300 series stainless steel

O-ring: FKM [-4°F to 392°F (-20°C to 200°C)]

Maximator recommends pipe connections, sealed with PTFE-Tape, be operated between 1°F (-17°C) and 450°F (230°C). By use anaerobic sealants follow the instruction of the Sealant-Manufacturer.

Pipe Ball Check Valves

» Pressures to 15,200 psi (1,050 bar)

Pipe Ball Check Valves

Maximator Pipe Ball Check Valves prevent reverse flow where bubble tight shut-off is not mandatory. These check valves are designed to operate to 660°F (350°C). These check valves are not to be used as a relief device. The opening pressure of the Pipe Ball Check Valves is approx. 20 psi (1.5 bar).

» **Materials:**

Body, cover, poppet, cover gland: 316 stainless steel

Ball: 400 series stainless steel

Spring: 300 series stainless steel

Maximator recommends pipe connections, sealed with PTFE-Tape, be operated between 1°F (-17°C) and 450°F (230°C). By use anaerobic sealants follow the instruction of the Sealant-Manufacturer.

Pipe Line Filter

Maximator Pipe Line Filters are used to filter process fluids in high pressure systems. The cup type design is used when maximum filtration surface area and a single micron size element is preferred. This design increases the filter area as much as 6 times the area of the disc type filter, and will permit higher flow rates with a lower pressure drop, and longer intervals between element changes. Filter elements come standard in 5, 30, or 56 micron sizes and are easily replaced. Filters are rated for temperatures -330°F to 660°F (-200°C to 350°C).

It is recommended that all fluids entering a high pressure system be thoroughly cleaned.

Maximator filters are designed to remove small amounts of process particles. Pressure differential should not exceed 1000 psi across the filter elements.

Medium Pressure Valves, Fittings and Tubing

» Pressures to 22,500 psi (1,550 bar)

MAXIMATOR has been designing and manufacturing high pressure equipment for more than thirty years and has a worldwide reputation for quality and reliability, backed by one of the best service organizations in the industry.

Medium Pressure Valves feature:

- Rising stem design.
- 316 L (1.4404) / duplex wetted parts and 17-4 PH Stem for excellent corrosion resistance.
- Metal-to-metal seating achieves bubble-tight shut-off, longer stem and seat life, greater durability for repeated open and close cycles.
- PTFE and carbon packing with metal back-up rings offers reliable stem to body sealing.
- Non-rotating stem prevents stem to seat galling.
- Stem sleeve and packing gland materials have been selected to achieve optimum thread cycle life and reduced handle torque. All stem sleeve threads are rolled, assuring smooth operation.
- Safety weep holes for all pressure connections and packing area.
- Six different valve body patterns, with choice of vee or regulating type stem tip.

MAXIMATOR offers a complete line of medium pressure valves, fittings, tubing, check valves, line filters, anti-vibration fittings and safety head assemblies. All medium pressure valves and fittings use the medium pressure style connection. This coned and threaded connection features orifice sizes to match the high flow characteristics of the medium pressure valve, fittings and tubing line.

Note: When selecting multiple items, the pressure rating would be that of the lowest rated component.

Check Valves

» Pressures to 15,200 psi (1,050 bar)

O-Ring Check Valves

Maximator O-Ring Check Valves provide high quality directional flow control and tight shut-off for liquids and gases. All Check Valves are supplied with glands and collars. These Check Valves are not to be used as a relief device. The opening pressure of the O-Ring Check Valves is approx. 20 psi (1.5 bar).

» **Materials:**

Body, cover gland: 318 Duplex stainless steel

Cover, poppet: 316L stainless steel

Spring: 300 series stainless steel

O-Ring: FKM [-4°F to 392°F(-20°C to 200°C)]

Ball Check Valves

Maximator Ball Check Valves prevent reverse flow where bubble tight shut-off is not mandatory. These Check Valves are designed with a ball cradled floating poppet to assure positive inline seating. This poppet design allows full flow around the ball to minimize pressure drop. Check Valves are rated to 660°F (350°C). All Check Valves are supplied with glands and collars. These Check Valves are not to be used as a relief device. The opening pressure of the Ball Check Valves is approx. 20 psi (1.5 bar).

Tubing and Coned and Threaded Nipples

» Pressures to 15,200 psi (1,050 bar)

High Pressure Tubing

Maximator offers a line of cold drawn thick wall tubing, with flow areas to compliment the 15,200 psi high pressure valves and fittings series. This tubing is made under strict manufacturing and quality control standards and inspections, with dimensional tolerances to match the requirements of the high pressure coned and threaded connections. Maximator offers this tubing made of 316L (High Nickel) which is especially suited for hydrogen service.

Tubing Tolerances

Double Block and Bleed Needle Valves

Maximator series DBBNV Double Block and Bleed Needle Valves with metal to metal seats have a high level of safety and reliability under adverse operating conditions. Double Block and Bleed Needle Valves are three stem manifold valves designed for blocking and bleeding in test and pressure monitoring applications as well as for chemical injection or drain line isolation up to 22,500 psi (1,550 bar).

Due to the standard valve packing and Vee stem design, Maximator double block and bleed needle valves are very compact and easy to use. In addition, manifold style valves reduce the number of fittings and space required for installation.

Medium Pressure Fittings

» Pressures to 22,500 psi (1,550 bar)

Medium pressure fittings

Maximator medium pressure fittings are designed with the large orifice for use with the 21V series medium pressure valves and medium pressure tubing. All medium pressure fittings have coned and threaded type connections. Mounting holes are standard on all elbows, tees and crosses.

Tubing Size in. (mm)	Gland	Collar	Plug	Tubing Cap
1/4 (6.35)	21G4M	21C4M	21P4M	21TC4M

1 (25.4)	21G16M	21C16M	21P16M	21TC16M

Connection Components

All medium pressure fittings are supplied with glands and collars. Refer to the adjacent chart for ordering any of the connection components individually. When using the plug, the collar is not needed.

Anti-Vibration Collet Gland Assembly

» Pressures to 22,500 psi (1,550 bar)

Anti-vibration collet gland assemblies

Maximator anti-vibration collet gland assemblies are for use in applications where there could be extreme external mechanical vibrations or shock in tubing lines. These collet gland assemblies are interchangeable with the standard medium pressure coned and threaded tube connections.

In a normal coned and threaded tube connection, any external mechanical loading on the tubing lines, valves or fittings would be concentrated on the first thread of the tube. This can cause failure of the tube at this thinner cross-section. The anti-vibration collet gland assembly grips the tube behind the connection, supporting the tube at the full cross-section and straight area, moving the loading away from the threaded area.

The back part of the assembly has a gland nut that, when tightened properly, compresses a split collet on the tube, providing the beneficial gripping action. All anti-vibration collet gland assemblies come with a Molybdenum Disulfide Coating to guard against galling of the stainless components.

O-Ring Check Valves

Maximator O-Ring Check Valves provide high quality directional flow control and tight shut-off for liquids and gases. All check valves are supplied with glands and collars. These check valves are not to be used as a relief device. The opening pressure of the O-Ring Check Valves is approx. 20 psi (1.5 bar).

- » **Materials:**
Body, cover, poppet, cover gland: 316 stainless steel
Spring: 300 series stainless steel
O-ring: FKM [-4°F to 392°F(-20°C to 200°C)]

Ball Check Valves

Ball Check Valves prevent reverse flow where bubble tight shut-off is not mandatory. These check valves are designed with a ball cradled floating poppet to assure positive inline seating. This poppet design allows full flow around the ball to minimize pressure drop. Check valves are rated to 660°F (350°C). All check valves are supplied with glands and collars. These check valves are not to be used as a relief device. The opening pressure of the Ball Check Valves is approx. 20 psi (1.5 bar).

» **Materials:**

- Body, cover, poppet, cover gland: 316 stainless steel
- Ball: 400 series stainless steel
- Spring: 300 series stainless steel.

Line Filters

» Pressures to 22,500 psi (1,550 bar)

Dual-Disc Line Filters

Maximator Dual-Disc Line Filters are used to filter process fluids in high pressure systems. This design helps remove the large particles first through a coarse primary disc, which then allows a secondary disc to provide a smaller micron filtration. These filter elements are designed to withstand pressure surges without cracking, flaking, or rupturing. Filter elements come standard in the following micron sizes: 5/8, 8/30, 30/56 (secondary/primary). Filters are rated for temperatures -423°F to 660°F **(-252°C to 350°C)**. All line filters come with glands and collars.

» Materials:

Body, cover, cover gland: 316L series stainless steel

Element: 316 stainless steel

Cup-Type Line Filters

Maximator Cup-Type Line Filters are used when maximum filtration surface area and a single micron size element is preferred. This design increases the filter area as much as 6 times the area of the disc type filter, and will permit higher flow rates with a lower pressure drop, and longer intervals between element changes. Filter elements come standard in 5, 30, or 56 micron sizes and are easily replaced. Filters are rated for temperatures -423°F to 660°F **(-252°C to 350°C)**. All line filters come with glands and collars.

It is recommended that all fluids entering a high pressure system be thoroughly cleaned.

Maximator filters are designed to remove small amounts of process particles. Pressure differential should not exceed 1000 psi across the filter elements.

All dimensions for reference only and are subject to change.

All technical and dimensional information subject to change. All general Terms and Conditions of sale, including limitations of our liability, apply to all products and services sold.

Angle Filters

» Pressures to 22,500 psi (1,550 bar)

Angel Filters

Maximator Angle Filters are used to filter gases or liquids in high pressure systems. The filter elements can be easily changed in-situ. The special design allows the exchange of the filter element without the need to first disassemble the filter in front of the tubing. Filter elements are made of sintered material with pore sizes of 5 µm, 30 µm or 56 µm. Filters are rated for temperatures -423°F to 660°F (-252°C to 350°C). All angle filters come with glands and collars.

It is recommended that all fluids entering a high pressure system be thoroughly cleaned.
Maximator filters are designed to remove small amounts of process particles. Pressure differential should not exceed 1000 psi across the filter elements.

Safety head assemblies

Maximator safety head assemblies are used to provide over-pressure protection to high pressure systems. These safety head assemblies are to be used with the appropriate 1/4" angular rupture disc listed in the chart below.

Safety Head Assembly Catalog Number without Disc	Fits Connection Type	Pressure Rating psi (bar)	Body Torque ft - lbs. (Nm)	Dimensions in. (mm)

1/4" Rupture Discs

1/4" Rupture discs

1/4" angular and flat seat rupture discs are designed to be used with the safety head assemblies that are shown on page 13. Minimum rupture disc pressure ratings should be at least 110% of system operating pressure. The standard material is stainless steel. The pressure ranges indicated in the table below are at room temperature (72°F). Other materials and pressure ranges are available upon request.

Catalog Number	Pressure range psi (bar)
RD-1000	970 - 1,060 (66.9 - 73.1)
RD-1200	1,164 - 1,272 (80.3 - 87.7)

Relief Valves

Maximator Medium Pressure Relief Valves with metal seat provide reliable venting of liquids for set pressure from 4,350 psi (300 bar) up to 22,500 psi (1,550 bar). The relief valves are intended to be used as an adjustable pressure relief device actuated by inlet static pressure having a gradual lift generally proportional to the increase in pressure over opening pressure.

All relief valves are ATEX compliant, have a 1/4" NPT relief connection, are equipped with a replaceable seat and come with glands and collars.

Materials:

- Body, double cone: 316 stainless steel
- Spring: 300 series stainless steel
- O-ring: FKM [-4°F to 392°F (-20°C to 200°C)]

Medium Pressure Tubing

» Pressures to 22,500 psi (1,550 bar)

Medium Pressure Tubing

Maximator offers a line of cold drawn thick wall tubing, with flow areas to compliment the large orifice medium pressure valves and fittings. This tubing is made under strict manufacturing and quality control standards and inspections, with dimensional tolerances to match the requirements of the medium pressure coned and threaded connections.

The standard material is 316 stainless steels. Other materials may be provided on special request, depending on the specific material, diameters and lengths.

Tubing Tolerances

Coned and threaded nipples

Maximator offers a line of coned and threaded medium pressure tube nipples in a variety of lengths for all standard tube sizes. The coned and threaded medium pressure tube nipples are available in 316 stainless steel.

They are also available in the 15,200 psi (1,050 bar) or 22,500 psi (1,550 bar) versions for the 9/16", 3/4" and 1" OD tube sizes. See chart below for ordering information.

Special length coned and threaded nipples are available upon request. Consult Maximator for availability and price

High Pressure Valves, Fittings and Tubing

» Pressures to 65,000 psi (4,500 bar)

MAXIMATOR has been designing and manufacturing high pressure equipment for more than thirty years and has a worldwide reputation for quality and reliability, backed by one of the best service organizations in the industry.

High Pressure Valves feature:

- Rising stem design.
- 316 L (1.4404) wetted parts and 17-4 PH Stem for excellent corrosion resistance.
- Metal-to-metal seating achieves bubble-tight shut-off, longer stem and seat life, greater durability for repeated open and close cycles.
- PTFE and carbon packing with metal back-up rings offers reliable stem to body sealing.
- Non-rotating stem prevents stem to seat galling.
- Stem sleeve and packing gland materials have been selected to achieve optimum thread cycle life and reduced handle torque. All stem sleeve threads are rolled, assuring smooth operation.

- Safety weep holes for all pressure connections and packing area.
- Six different valve body patterns, with choice of vee or regulating type stem tip.

MAXIMATOR offers a complete line of high pressure valves, fittings, tubing, check valves, line filters, anti-vibration fittings and safety head assemblies. All high pressure valves and fittings use the high pressure style connection.

Note: When selecting multiple items, the pressure rating would be that of the lowest rated component.

High pressure valves

Maximator high pressure valves with metal to metal seats have a high level of safety and reliability under adverse operating conditions. These valves may be used both with gases and liquids.

Traceability is ensured through extensively documented data (batch number, max. pressure, material number, type designation). All high pressure valves include glands and collars.

36 V Valve Series	4H O.D. Tube Size	87 Stem Type	2 Body Pattern	Options

	9H – 9/16"	87 – VEE stem with replaceable seat	3 – three-way, two on pressure	option, see
		88 – REGULATING stem with replaceable seat*	4 – three-way, one on pressure	information
			5 – three-way, two-stem manifold	below.

Options for High pressure valves

Special Designs for Extreme Temperatures

Standard valves are supplied with Teflon / Carbon packing and may be operated to 450°F (230°C). High temperature packing and / or extended stuffing box are available for service from -423°F to 1200°F (-252°C to 650°C) by adding the following suffixes to catalog order number.

- **TG** – standard valve with teflon glass packing to 600°F (315°C).

- **GY** – standard valve with graphite braided yarn packing to 800°F (425°C).
- **HT** – extended stuffing box valve with graphite braided yarn packing to 1200°F (650°C).
- **B** – standard valve with cryogenic trim materials and Teflon packing to -100°F (-73°C).
- **LT** – extended stuffing box valve with teflon packing and cryogenic trim materials to -423°F (-252°C).

O.D. Size in. (mm)	Connec- tion Type	Orifice Size in. (mm)	Rated Cv**	Pressure Rating @ R.T. psi (bar)***
1/4 (6.35)	4HF	0.094 (2.3)	0.12	36,000 (2,500)
3/8 (9.53)	6HF	0.125 (3.2)	0.23	36,000 (2,500)
9/16 (14.30)	9HF	0.125 (3.2)	0.33	36,000 (2,500)

Consult your MAXIMATOR representative for **repair kits** and valve bodies. Refer to the Technical Information section for proper maintenance procedures.

* tapered tip for regulating and shutoff

** Cv values shown are for 2-way straight pattern vee stem valves. For 2-way angle patterns, increase the Cv value by 50%.

*** See page 2 in the Technical Section for Pressure/Temperature Rating Chart.

High Pressure Valves

» Pressures to 43,000 psi (2,965 bar)

Ordering Information
Typical catalog number:
43V16M072

High pressure valves

Maximator high pressure valves with metal to metal seats have a high level of safety and reliability under adverse operating conditions. These valves may be used both with gases and liquids.

Traceability is ensured through extensively documented data (batch number, max. pressure, material number, type designation). All high pressure valves include glands and collars.

43 V Valve Series	16M O.D. Tube Size	07 Stem Type	2 Body Pattern

High Pressure Fittings

» Pressures to 43,000 psi (2,965 bar)

High pressure fittings

Maximator high pressure fittings are designed to be used with the 43V series high pressure valves and high pressure tubing. All high pressure fittings have coned and threaded type connections. Mounting holes are standard on all elbows, tees and crosses.

Tubing Size	Gland	Collar	Plug	Tubing Cap
1	43G16M	43C16M	43P16M	43TC16M

Connection Components

All high pressure fittings are supplied with glands and collars. Refer to the adjacent chart for ordering any of the connection components individually. When using the plug, the collar is not needed.

Anti-Vibration and Safety Head Assembly

» Pressures to 43,000 psi (2,965 bar)

Anti-vibration collet gland assemblies

Maximator anti-vibration collet gland assemblies are for use in applications where there could be extreme external mechanical vibrations or shock in tubing lines. These collet gland assemblies are interchangeable with the standard high pressure coned and threaded tube connections.

Gland Pattern	Catalog Number	Part	O.D. Tubing Size in.	Dimensions in. (mm)	
				A	B (Hex.)

Check Valves

» Pressures to 43,000 psi (2,965 bar)

O-Ring Check Valves

Maximator O-Ring Check Valves provide high quality directional flow control and tight shut-off for liquids and gases. All Check Valves are supplied with glands and collars. These Check Valves are not to be used as a relief device. The opening pressure of the O-Ring Check Valves is approx. 20 psi (1.5 bar).

» **Materials:**

Body, cover, poppet, cover gland: 316 stainless steel

Spring: 300 series stainless steel

O-Ring: FKM [-4°F to 392°F(-20°C to 200°C)]

Ball Check Valves

Maximator Ball Check Valves prevent reverse flow where bubble tight shut-off is not mandatory. These Check Valves are designed with a ball cradled floating poppet to assure positive inline seating. This poppet design allows full flow around the ball to minimize pressure drop. Check Valves are rated to 660°F (350°C). All Check Valves are supplied with glands and collars. These Check Valves are not to be used as a relief device. The opening pressure of the Ball Check Valves is approx. 20 psi (1.5 bar).

» **Materials:**

Body, cover, poppet, cover gland: 316L series stainless steel

Ball and Spring: 300 series stainless steel

Valve Pattern	Catalog Number	Connection Type	Pressure Rating psi (bar)	Orifice in. (mm)	Rated (Cv)	Dimensions in. (mm)	
						A (Hex.)	B
O-Ring Check Valves							
	43OC16M	16MF	43,000 (2,965)	0.438 (11.1)	4.3	2.00 (50.8)	6.433 (163.4)
Ball Check Valves							
	43BC16M	16MF	43,000 (2,965)	0.438 (11.1)	4.3	2.00 (50.8)	6.433 (163.4)

CAUTION: FREQUENT INSPECTIONS of O-Rings are necessary to ensure proper service of the check valve. O-Rings have shown satisfactory service life in testing, however different service conditions may lead to variations in cycle and shelf life. All dimensions are for reference only and subject to change.

Tubing and Coned and Threaded Nipples

» Pressures to 43,000 psi (2,965 bar)

High Pressure Tubing

Maximator offers a line of cold drawn thick wall tubing, with flow areas to compliment the 43,000 psi high pressure valves and fittings series. This tubing is made under strict manufacturing and quality control standards and inspections, with dimensional tolerances to match the requirements of the high pressure coned and threaded connections.

Tubing Tolerances

Normal Tubing Size in. (mm)		Tolerance O.D in. (mm)
1	(25.4)	0.995 / 0.990 (25.273 / 25.174)

All dimensions for reference only and are subject of change.

Coned and threaded nipples

Maximator offers a line of coned and threaded high pressure tube nipples in a variety of lengths for all standard tube sizes.

The coned and threaded high pressure tube nipples are available in 316 stainless steel. See chart below for ordering information.

Special length coned and threaded nipples are available upon request. Consult Maximator for availability and price.

Catalog Numbers are 316 Stainless Steel material Length in. (mm)				Fits Connection Type	Tube Size in. (mm)		Working Pressure at 100°F psi (bar)

High pressure valves

Maximator high pressure valves with metal to metal seats have a high level of safety and reliability under adverse operating conditions. These valves may be used both with gases and liquids.

Traceability is ensured through extensively documented data (batch number, max. pressure, material number, type designation). All high pressure valves include glands and collars.

65 V Valve Series	6H O.D. Tube Size	07 Stem Type	3 Body Pattern	Options
65 V	4H – 1/4"	07 – VEE stem	1 – two-way straight	Extreme
	6H – 3/8"	08 – REGULATING stem*	2 – two-way angle	temperature
	9H – 9/16"	87 – VEE stem with replaceable seat	3 – three-way, two on pressure	option, see
		88 – REGULATING stem with replaceable seat*	4 – three-way, one on pressure	information
			5 – three-way, two-stem manifold	below.

Options for High pressure valves

Special Designs for Extreme Temperatures

Standard valves are supplied with Teflon / Carbon packing and may be operated to 450°F (230°C). High temperature packing and / or extended stuffing box are available for service from -423°F to 1200°F (-252°C to 650°C) by adding the following suffixes to catalog order number.

- **TG** – standard valve with teflon glass packing to 600°F (315°C).

- **GY** – standard valve with graphite braided yarn packing to 800°F (425°C).
- **HT** – extended stuffing box valve with graphite braided yarn packing to 1200°F (650°C).
- **B** – standard valve with cryogenic trim materials and Teflon packing to -100°F (-73°C).
- **LT** – extended stuffing box valve with teflon packing and cryogenic trim materials to -423°F (-252°C).

O.D. Size in. (mm)	Connec- tion Type	Orifice Size in. (mm)	Rated Cv**	Pressure Rating @ R.T. psi (bar)***
1/4 (6.35)	4HF	0.062 (1.6)	0.08	65,000 (4,500)
3/8 (9.53)	6HF	0.062 (1.6)	0.09	65,000 (4,500)
9/16 (14.30)	9HF	0.078 (2)	0.14	65,000 (4,500)

Consult your MAXIMATOR representative for **repair kits** and valve bodies. Refer to the Technical Information section for proper maintenance procedures.

* tapered tip for regulating and shutoff

** Cv values shown are for 2-way straight pattern vee stem valves. For 2-way angle patterns, increase the Cv value by 50%.

*** See page 2 in the Technical Section for Pressure/Temperature Rating Chart.

High Pressure Fittings

» Pressures to 65,000 psi (4,500 bar)

High pressure fittings

Maximator high pressure fittings are designed to be used with the 36V and 65V series high pressure valves and high pressure tubing. All high pressure fittings have coned and threaded type connections. Mounting holes are standard on all elbows, tees and crosses.

Tubing Size	Gland	Collar	Plug	Tubing Cap
1/4	65G4H	65C4H	65P4H	65TC4H
3/8	65G6H	65C6H	65P6H	65TC6H

Anti-Vibration Collet Gland Assembly

» Pressures to 65,000 psi (4,500 bar)

Anti-vibration collet gland assemblies

Maximator anti-vibration collet gland assemblies are for use in applications where there could be extreme external mechanical vibrations or shock in tubing lines. These collet gland assemblies are interchangeable with the standard high pressure coned and threaded tube connections.

In a normal coned and threaded tube connection, any external mechanical loading on the tubing lines, valves or fittings, would be concentrated on the first thread of the tube. This can cause failure of the tube at this thinner cross-section. The anti-vibration collet gland assembly grips the tube behind the connection, supporting the tube at the full cross-section and straight area, moving the loading away from the threaded area.

The anti-vibration collet gland assembly, when tightened properly, compresses a split collet on the tube, providing the beneficial gripping action. All anti-vibration collet gland assemblies come with a Molybdenum Disulfide Coating to guard against galling of the stainless components.

Check Valves

» Pressures to 65,000 psi (4,500 bar)

O-Ring Check Valves

Maximator O-Ring Check Valves provide high quality directional flow control and tight shut-off for liquids and gases. All Check Valves are supplied with glands and collars. These Check Valves are not to be used as a relief device. The opening pressure of the O-Ring Check Valves is approx. 20 psi (1.5 bar).

- » **Materials:**
Body, cover, poppet, cover gland: 316 stainless steel
Spring: 300 series stainless steel
O-Ring: FKM [-4°F to 392°F(-20°C to 200°C)]

Ball Check Valves

Maximator Ball Check Valves prevent reverse flow where bubble tight shut-off is not mandatory. These Check Valves are designed with a ball cradled floating poppet to assure positive inline seating. This poppet design allows full flow around the ball to minimize pressure drop. Check Valves are rated to 660°F. (350°C). All Check Valves are supplied with glands and collars. These Check Valves are not to be used as a relief device. The opening pressure of the Ball Check Valves is approx. 20 psi (1.5 bar).

- » **Materials:**
Body, cover, poppet, cover gland: 316 series stainless steel
Ball: 400 series stainless steel
Spring: 300 series stainless steel

Valve Pattern	Catalog Number	Connection Type	Pressure Rating psi (bar)	Orifice in. (mm)	Rated (Cv)	Dimensions in. (mm)

	650C9H	9HF	65,000 (4,500)	0.188 (4.8)	0.63	1.63 (41.4)	4.61 (117.1)
Ball Check Valves							
	65BC4H	4HF	65,000 (4,500)	0.094 (2.3)	0.15	1.19 (30.2)	3.40 (86.4)
	65BC6H	6HF	65,000 (4,500)	0.125 (3.2)	0.28	1.19 (30.2)	3.81 (96.8)
	65BC9H	9HF	65,000 (4,500)	0.188 (4.8)	0.63	1.63 (41.4)	4.61 (117.1)

CAUTION: FREQUENT INSPECTIONS of O-Rings are necessary to ensure proper service of the check valve. O-Rings have shown satisfactory service life in testing, however different service conditions may lead to variations in cycle and shelf life. All dimensions are for reference only and subject to change.

Line Filters

» Pressures to 65,000 psi (4,500 bar)

Dual-Disc Line Filters

Maximator Dual-Disc Line Filters are used to filter process fluids in high pressure systems. This design helps remove the large particles first through a coarse primary disc, which then allows a secondary disc to provide a smaller micron filtration. These filter elements are designed to withstand pressure surges without cracking, flaking, or rupturing. Filter elements come standard in the following micron sizes: 5/8, 8/30, 30/56 (secondary/primary). Filters are rated for temperatures from -423°F to 660°F **(-252°C to 350°C)**. All Line Filters come with glands and collars.

» Materials:

Body, cover, cover gland: 316 series stainless steel

Element: 316 series stainless steel

Cup-Type Line Filters

Maximator Cup-Type Line Filters are used when maximum filtration surface area and a single micron size element is preferred. This design increases the filter area as much as 6 times the area of the disc type filter, and will permit higher flow rates with a lower pressure drop, and longer intervals between element changes. Filter elements come standard in 5, 30, or 56 micron sizes and are easily replaced. Filters are rated for temperatures from -423°F to 660°F **(-252°C to 350°C)**. All line filters come with glands and collars.

It is recommended that all fluids entering a high pressure system be thoroughly cleaned.

Maximator filters are designed to remove small amounts of process particles. Pressure differential should not exceed 1000 psi across the filter elements.

All dimensions for reference only and are subject to change.

All technical and dimensional information subject to change. All general Terms and Conditions of sale, including limitations of our liability, apply to all products and services sold.

Angle Filters

» Pressures to 65,000 psi (4,500 bar)

Angle Filters

Maximator angle filters are used to filter gases or liquids in high pressure systems. The filter elements can be easily changed in-situ. The special design allows the exchange of the filter element without the need to first disassemble the filter in front of the tubing. Filter elements are made of sintered material with pore sizes of 5 µm, 30 µm or 56 µm. Filters are rated for temperatures from -423°F to 660°F **(-252°C to 350°C)**. All angle filters come with glands and collars.

Rupture Discs

» Pressures to 65,000 psi (4,500 bar)

1/4" Rupture discs

1/4" angular and flat seat rupture discs are designed to be used with the safety head assemblies that are shown on page 18. Minimum rupture disc pressure ratings should be at least 110% of system operating pressure. The standard material is stainless steel. The pressure ranges indicated in the table below are at room temperature (72°F). Other materials and pressure ranges are available upon request.

Relief Valves

» Pressures to 65,000 psi (4,500 bar)

Relief Valves

Maximator High Pressure Relief Valves with metal seat provide reliable venting of liquids for set pressure from 14,500 psi (1.000 bar) up to 65,000 psi (4,500 bar). The relief valves are intended to be used as an adjustable pressure relief device actuated by inlet static pressure having a gradual lift generally proportional to the increase in pressure over opening pressure.

All relief valves are ATEX compliant, have a 1/4" NPT relief connection, are equipped with a replaceable seat and come with glands and collars.

Materials:

Body, double cone: 316 stainless steel

Spring: 300 series stainless steel

O-ring: FKM [-4°F to 392°F (-20°C to 200°C)]

High Pressure Tubing

Maximator offers a line of cold drawn thick wall tubing, with flow areas to compliment the high pressure valves and fittings. This tubing is made under strict manufacturing and quality control standards and inspections, with dimensional tolerances to match the requirements of the high pressure coned and threaded connections.

The standard material is 316 stainless steels. Other materials may be provided on special request, depending on the specific material, diameters and lengths.

Standard nipples are not supplied with glands and collars, see Fittings on page 6 for these components.
See adjacent Tubing page 21, for pressure/temperature rating chart.

All dimensions are for reference only and subject to change.

Ultra High Pressure Valves, Fittings and Tubing

» Pressures to 152,000 psi (10,500 bar)

MAXIMATOR has been designing and manufacturing high pressure equipment for more than thirty years and has a worldwide reputation for quality and reliability, backed by one of the best service organizations in the industry.

Pipe Valves feature:

- Rising stem design.
- High Strength Stainless Steel wetted parts with a 17-4 PH stem provides excellent corrosion resistance.
- Metal-to-metal seating achieves bubble-tight shut-off, longer stem and seat life, greater durability for repeated open and close cycles.
- PTFE and carbon packing with metal back-up rings offers reliable stem to body sealing.
- Non-rotating stem prevents stem to seat galling.
- Stem sleeve and packing gland materials have been selected to achieve optimum thread cycle life and reduced handle torque. All stem sleeve threads are rolled, assuring smooth operation.
- Safety weep holes for all pressure connections and packing areas.
- Three different valve body patterns, with vee type stem tip.

MAXIMATOR offers a complete line of high pressure valves, fittings and tubing.

Note: When selecting multiple items, the pressure rating would be that of the lowest rated component.

Temperature Ranges

Standard valves are supplied with Teflon/Carbon packing and may be operated to 450°F (230°C). Consult Maximator for higher temperature packing ratings.

O.D. Size in. (mm)	Connec- tion Type	Orifice Size in. (mm)	Rated Cv*	Pressure Rating @ R.T. psi (bar)**
1/4 (6.35)	4UF	0.062 (1.6)	0.09	101,000 (7,000)
5/16 (7.94)	5UF	0.062 (1.6)	0.09	101,000 (7,000)
3/8 (9.53)	6UF	0.062 (1.6)	0.09	101,000 (7,000)
9/16 (14.29)	9UF	0.062 (1.6)	0.09	101,000 (7,000)

* Cv values shown are for 2-way straight pattern vee stem valves.
For 2-way angle patterns, increase the Cv value by 50%.

** See page 2 in the Technical Section for Pressure/Temperature Rating Chart.

Ball Check Valves

Maximator Ball Check Valves prevent reverse flow where bubble tight shut-off is not mandatory. These Check Valves are designed with a ball cradled floating poppet to assure positive inline seating.

This poppet design allows full flow around the ball to minimize pressure drop. Check Valves are rated to 660°F. (350°C). All Check Valves are supplied with glands and collars.

These Check Valves are not to be used as a relief device. The opening pressure of the Ball Check Valves is approx. 20 psi (1.5 bar).

» Materials:

Body, cover, poppet, cover gland: 316 series stainless steel

Ball: 400 series stainless steel

Spring: 300 series stainless steel

Ultra High Pressure Tubing

» Pressures to 101,000 psi (7,000 bar)

High Pressure Tubing

Maximator offers a line of cold drawn thick wall tubing, with flow areas to compliment the high pressure valves and fittings. This tubing is made under strict manufacturing and quality control standards and inspections, with dimensional tolerances to match the requirements of the high pressure coned and threaded connections.

The standard material is HP 160 stainless steels. Other materials may be provided on special request, depending on the specific material, diameters and lengths.

Tubing Tolerances

to 21,000 psi (1,500 bar)

Coned and threaded nipples

Maximator offers a line of coned and threaded ultra high pressure tube nipples in a variety of lengths.

The coned and threaded ultra high pressure tube nipples are available in 316 stainless steel. See chart below for ordering information.

Special length coned and threaded nipples are available upon request. Consult Maximator for availability and price.

Catalog Numbers are 316 Stainless Steel material Lenght in. (mm)					Fits Connection Type	Tube Size in. (mm)		Working Pressure at 100°F psi (bar)

Standard nipples are not supplied with glands and collars, see Fittings on page 3 for these components.
See the above chart for Pressure/Temperature Rating.

All dimensions are for reference only and subject to change.

Valve Actuators

MAXIMATOR air operated valve actuators are piston type design, and are mounted on a manual valve to provide remote control capability. There are two air to open actuators and two air to close actuators available, and selection is based on the valve size, system pressure, and air pressure available.

Valves Actuator features:

- All valve actuators are ATEX compliant
- Piston style valve actuator design offers dependable operation and longer actuator cycle life.
- Two different size actuators are available to cover varying plant air supplies.
- Actuators are made of anodized aluminum, which provides good corrosion resistance.
- Actuators are available in normally open or normally closed configuration.
- Actuators are available in double acting configuration.

MAXIMATOR offers a complete line of high pressure valves, fittings and tubing to compliment the valve actuator line.

Note: When selecting multiple items, the pressure rating would be that of the lowest rated component.

» Air to Close, Normally Open

Order Information

Select the basic manual valve from the appropriate pressure section, then add the actuator suffix number to the end of the manual Valve catalog number.

Example: 21V4M071-YMNO, medium duty actuator, normally open. This valve can be operated at 22,500 psi with an air supply of 100 psi to the valve actuator.

Medium Duty Valve Actuator

Actuator type	Ordering Suffix	Piston area in. ² (mm ²)	A in. (mm)	B in. (mm)	C in. (mm)	D in. (mm)	F in. (mm)	G in. (mm)	H in. (mm)

Ball Valves

» Pressures to 21,000 psi (1,500 bar)

MAXIMATOR ball valves provide superior quality and performance with a variety of valve styles and process connections. All medium and high pressure connections are supplied with glands and collars.

Ball Valves feature:

- One-piece, trunnion mounted style stem design eliminates shear failure found in two-piece stem designs.
- Choice of 3/16", 1/4", 3/8" and 1/2" ball orifices provides minimal pressure drops.
- Re-torqueable seat glands for longer seat life and dependability.
- Torlon Ball Seat material offers excellent sealing capabilities.
- 316 cold worked stainless steel body, and 17-4 PH stem offers excellent corrosion resistance.
- Ball valves are available in 90° and 180° open to close with a positive stop.
- Available with Pneumatic or Electric actuators.
- Available in medium, high, BSP and NPT pressure connections.
- Full materials traceability.
- Safety weep holes for all pressure connections and packing area.

MAXIMATOR offers a complete line of high pressure components to compliment the 2-way and 3-way Ball Valve line.

Note: When selecting multiple items, the pressure rating would be that of the lowest rated component.

Caution: Ball valves are not recommended for small molecular gases (Hydrogen, Helium).

2-Way Ball Valves

» Pressures to 21,000 psi (1,500 bar)

Ordering Information
Typical catalog number:
21B244M

2-Way Ball Valves

2-Way Ball Valves are available with 1/4", 3/8" or 1/2" orifices and are capable of safe handling of liquids and gases up to 21,000 psi (**1,500 bar**) pressure. Their 90° handle rotation allows for full flow capabilities with minimal pressure drop. Robust one-piece trunnion style stem design eliminates shear failure that is found in a two-piece stem design.

Ball seats are made of Torlon material providing excellent sealing capabilities with low handle operating torque. Re-torqueable seat glands provide longer valve life and dependability. Standard valves are supplied with FKM O-Rings rated to 300°F (**150°C**).

21 Pressure (x 1000 psi)	B2 Valve Series	4 Orifice Diameter	4M Connection Type	Options

3-Way Ball Valves

» Pressures to 21,000 psi (1,500 bar)

Ordering Information
Typical catalog number:
21B3S34M

3-Way Ball Valves

3-Way Ball Valves have 3/16", 3/8" or 1/2" orifices and are capable of safe handling of liquids and gases up to 21,000 psi (**1,500 bar**) pressure. Robust one-piece trunnion style stem design eliminates shear failure that is found in a two-piece stem design. There are two styles in the 3-way design:

The 180° rotating Switching Ball Valve is designed to have fluid enter in through the bottom connection and can be switched to either side connection. Also, the valve can be closed in the center "Off" position.

The 90° rotating Diverting Ball Valve is designed to have fluid enter in through the bottom connection and can be diverted to either side connection. There is no center off position in the diverting design.

Ball Valve Actuators

» Pneumatic Actuators - 1/4" Two Way, 3/16" Three Way

Pneumatic Actuator Features

- Pneumatic actuators are designed to be used with 2-way & 3-way style ball valves for remote operation.
- Two styles available:
Double acting: (air to open / air to close)
Single acting: (air to open / spring to close)
- Optional limit switches with visual indication available.
- Actuators are anodized aluminum, which provides good corrosion resistance. Stainless steel material is available upon request.
- Maximum operating air pressure is 145 psi (**10 bar**).
- Inlet air supply connection is 1/4" BSP
- Actuator operating temperature:
-4°F to 203°F (**-20°C to 95°C**).
- Minimal required air pressure is 80 psi (**5.5 bar**).
- Opening & closing time is less than one second.

Ordering Information

Simply add suffix to the manual ball valve catalog number:

DA = Double Acting Air Actuators

SA = Single Acting Air Actuators

Air Operated 2-Way Ball Valve

Air Operated 3-Way Ball Valve, 90° Diverter Style

Air Operated 3-Way Ball Valve, 180° Switching Style

All dimensions are for reference only and subject to change.

All technical and dimensional information subject to change. All general Terms and Conditions of sale, including limitations of our liability, apply to all products and services sold.

» Electric Actuators - 1/4" Two Way, 3/16" Three Way

Electric Actuator Features

- Electric actuators are designed to be used with 2-way & 3-way style ball valves for remote operation.
- Actuators will accept a wide range of single phase input voltages from 12 to 240 volts DC or AC current.
- Optional limit switches with visual indication available.
- Manual override option is standard.
- Actuators are made with polyamide material, which provides good corrosion resistance.
- Actuator operating temperature: -0°F to 160°F (-18°C to 70°C).
- Opening & closing time is less than ten seconds with 90° actuators.

Ordering Information

Simply add suffix to the manual ball valve catalog number:

EAL = Electric Actuator, 12 Volts AC or DC

EAH = Electric Actuator, 24 - 240 Volts AC or DC

Electrically Operated 2-Way Ball Valve

Electrically Operated 3-Way Ball Valve

All dimensions are for reference only and subject to change.

All technical and dimensional information subject to change. All general Terms and Conditions of sale, including limitations of our liability, apply to all products and services sold.

Ball Valve Actuators

» Pneumatic Actuators - 3/8" Two Way, 3/8" Three Way

Pneumatic Actuator Features

- Pneumatic actuators are designed to be used with 2-way & 3-way style ball valves for remote operation.
- Two styles available:
Double acting: (air to open / air to close)
Single acting: (air to open / spring to close)
- Optional limit switches with visual indication available.
- Actuators are anodized aluminum, which provides good corrosion resistance. Stainless steel material is available upon request.
- Maximum operating air pressure is 145 psi (**10 bar**).
- Inlet air supply connection is 1/4" BSP
- Actuator operating temperature:
-4°F to 203°F (**-20°C to 95°C**).
- Minimal required air pressure is 80 psi (**5.5 bar**).
- Opening & closing time is less than one second.

Ordering Information

Simply add suffix to the manual ball valve catalog number:

DA = Double Acting Air Actuators

SA = Single Acting Air Actuators

Air Operated 2-Way Ball Valve

Air Operated 3-Way Ball Valve, 90° Diverter Style

Air Operated 3-Way Ball Valve, 180° Switching Style

Valves, Fittings and Tubing for Sour Gas Applications

» Pressures to 30,000 psi (2,070 bar)

MAXIMATOR has been designing and manufacturing high pressure equipment for more than thirty years and has a worldwide reputation for quality and reliability, backed by one of the best service organizations in the industry.

Oil & Gas Products feature:

- Rising stem design, both solid and 2piece configuration are available.
- All pressure-containing materials comply with the requirements of NACE MR0175.
- Annealed 316 L (1.4404) wetted parts and 17-4 PH Stem (or N05500 for one piece stem) for excellent corrosion resistance.
- Metal-to-metal seating achieves bubble-tight shut-off, longer stem and seat life, greater durability for repeated open and close cycles.
- PTFE and carbon packing with metal back-up rings offers reliable stem to body sealing.
- Safety weep holes for all pressure connections and packing area.
- Six different valve body patterns, with choice of vee or regulating type stem tip.

MAXIMATOR offers a complete line of high pressure valves, fittings, tubing, check valves and line filters for standard oil field service where H₂S is present. All high pressure valves and fittings use the high pressure style connection.

Note: When selecting multiple items, the pressure rating would be that of the lowest rated component.

Sour Gas Valves

Maximator Sour Gas Valves are designed for oil and gas service where H₂S is present. All pressure containing components are made from annealed 316 stainless steel material in compliance with NACE MR0175. These needle valves with metal to metal seats have a high level of safety and reliability under harsh operating conditions. These valves may be used both with gases and liquids.

Traceability is ensured through extensively documented data (batch number, maximum pressure, material number, type designation). All Sour Gas components are supplied with collars and glands unless otherwise specified.

22 V Valve Series	4H O.D. Tube Size	07 Stem Type	1 Body Pattern	SOG- Sour Gas
22 V	4H – 1/4"	00 – One piece rotating Vee stem	1 – two-way straight	SOGWO–
	6H – 3/8"	01 – One piece rotating Regulating stem	2 – two-way angle	Sour Gas
	9H – 9/16"	07 – non rotating Vee stem (on-off service)	3 – three-way, two on pressure	without
		08 – non rotating Regulating stem (tapered tip for regulating and shut-off)	4 – three-way, one on pressure	Glands &
		80 – One piece Vee stem with replaceable seat	5 – three-way, two-stem manifold	Collars
		81 – One piece Regulating stem with replaceable seat		

O.D. Size in. (mm)	Connec- tion Type	Orifice Size in. (mm)	Rated Cv*	Pressure Rating @ R.T. psi (bar)**
1/4 (6.35)	4HF	0.094 (2.3)	0.12	22,500 (1,550)
3/8 (9.53)	6HF	0.125 (3.2)	0.23	22,500 (1,550)
9/16 (14.30)	9HF	0.125 (3.2)	0.33	22,500 (1,550)

* Cv values shown are for 2-way straight pattern vee stem valves.
For 2-way angle patterns, increase the Cv value by 50%.

** See page 2 in the Technical Section for Pressure/Temperature Rating Chart.

Consult your MAXIMATOR representative for **repair kits** and valve bodies. Refer to the Tools and Installation section for proper maintenance procedures.

Sour Gas Valves

Maximator Sour Gas Valves are designed for oil and gas service where H₂S is present. All pressure containing components are made from annealed 316 stainless steel material in compliance with NACE MR0175. These needle valves with metal to metal seats have a high level of safety and reliability under harsh operating conditions. These valves may be used both with gases and liquids.

Traceability is ensured through extensively documented data (batch number, maximum pressure, material number, type designation). All Sour Gas components are supplied with collars and glands unless otherwise specified.

30 V Valve Series	4H O.D. Tube Size	07 Stem Type	1 Body Pattern	SOG- Sour Gas
30 V	4H – 1/4"	00 – One piece rotating Vee stem	1 – two-way straight	SOGWO–
	6H – 3/8"	01 – One piece rotating Regulating stem	2 – two-way angle	Sour Gas
	9H – 9/16"	07 – non rotating Vee stem (on-off service)	3 – three-way, two on pressure	without
		08 – non rotating Regulating stem (tapered tip for regulating and shut-off)	4 – three-way, one on pressure	Glands &
		80 – One piece Vee stem with replaceable seat	5 – three-way, two-stem manifold	Collars
		81 – One piece Regulating stem with replaceable seat		

O.D. Size in. (mm)	Connec- tion Type	Orifice Size in. (mm)	Rated Cv*	Pressure Rating @ R.T. psi (bar)**
1/4 (6.35)	4HF	0.062 (1.6)	0.08	30,000 (2,070)
3/8 (9.53)	6HF	0.062 (1.6)	0.09	30,000 (2,070)
9/16 (14.30)	9HF	0.078 (2.0)	0.14	30,000 (2,070)

* Cv values shown are for 2-way straight pattern vee stem valves.
For 2-way angle patterns, increase the Cv value by 50%.

** See page 2 in the Technical Section for Pressure/Temperature Rating Chart.

Consult your MAXIMATOR representative for **repair kits** and valve bodies. Refer to the Tools and Installation section for proper maintenance procedures.

High Pressure Fittings for Sour Gas Applications

» Pressures to 30,000 psi (2,070 bar)

Sour Gas Fittings

Maximator Sour Gas Fittings are designed for oil and gas services where H₂S is present. All pressure containing components are made from annealed 316 stainless steel material in compliance with NACE MR0175. All High Pressure fittings are supplied with collars and glands. Mounting holes are standard on all elbows, tees, and crosses.

Tubing Size	Gland	Collar	Plug	Tubing Cap
1/4	30G4H-SOG	30C4H-SOG	30P4H-SOG	30TC4H-SOG
3/8	30G6H-SOG	30C6H-SOG	30P6H-SOG	30TC6H-SOG

Check Valves for Sour Gas Applications

» Pressures to 30,000 psi (2,070 bar)

O-Ring Check Valves

Maximator o-ring check valves provide high quality directional flow control and bubble tight shut-off for liquids and gases. These check valves are not to be used as a relief device. The opening pressure of the O-Ring Check Valves is approx. 20 psi **(1.5 bar)**.

» **Materials:**

Body, cover, poppet, cover gland: annealed 316 stainless steel

Spring: Inconel X-750

O-ring: FKM [-4°F to 392°F **(-20°C to 200°C)**]

Ball Check Valves

Maximator ball check valves prevent reverse flow where bubble tight shut-off is not mandatory. These check valves are designed to operate to 660°F. These check valves are not to be used as a relief device. The opening pressure of the Ball Check Valves is approx. 20 psi **(1.5 bar)**.

» **Materials:**

Body, cover, poppet, cover gland: annealed 316 series stainless steel

Ball: annealed 316 series stainless steel

Spring: Inconel X-750

Dual-Disc Line Filters

Maximator dual-disc line filters are used to filter process fluids in high pressure systems. This design helps remove the large particles first through a coarse primary disc, which then allows a secondary disc to provide a smaller micron filtration. These filter elements are designed to withstand pressure surges without cracking, flaking, or rupturing. Filter elements come standard in the following micron sizes: 5/8, 8/30, 30/56 (secondary/primary). Filters are rated for temperatures -60°F to 660°F (-50°C to 350°C). All line filters come with glands and collars.

» Materials:

Body, cover, cover gland: 316 series stainless steel

Element: 316 series stainless steel

Cup-Type Line Filters

Maximator cup-type line filters are used when maximum filtration surface area and a single micron size element is preferred. This design increases the filter area as much as 6 times the area of the disc type filter, and will permit higher flow rates with a lower pressure drop, and longer intervals between element changes. Filter elements come standard in 5, 30, or 56 micron sizes and are easily replaced. Filters are rated for temperatures -60°F to 660°F (-50°C to 350°C). All line filters come with glands and collars.

» Materials:

Body, cover, cover gland: 316 series stainless steel

Element: 316 series stainless steel

It is recommended that all fluids entering a high pressure system be thoroughly cleaned.

Maximator filters are designed to remove small amounts of process particles. Pressure differential should not exceed 1000 psi across the filter elements.

All dimensions for reference only and are subject to change.

All technical and dimensional information subject to change. All general Terms and Conditions of sale, including limitations of our liability, apply to all products and services sold.

Sour Gas Adapters and Couplings

» Adapters (male to female)

Adapters (male to female)

Maximator sour gas adapters and couplings are designed to join a variety of pressure connections where H₂S is present. All adapters are made of annealed 316 stainless steel material that meets NACE MR0175 specification.

» Instructions:

Find the male connection you want on the adapter in the „A“ column and the female connection of the adapter in the „B“ column. At the intersection of the two columns is the appropriate catalog number.

Male Connection A			Female Connection B

High Pressure Tubing for Sour Gas Applications

» Pressures to 30,000 psi (2,070 bar)

Sour Gas Tubing

Maximator Sour Gas Tubing is designed for oil and gas services where H₂S is present. All tubing is seamless annealed 316 stainless steel material in compliance with NACE MR0175. This tubing is made under strict manufacturing and quality control standards and inspections, with dimensional tolerances to match the requirements of the high pressure coned and threaded connections.

Tubing Tolerances

Normal Tubing Size in. (mm)	Tolerance O.D in. (mm)

Coned and threaded nipples

Maximator offers a line of coned and threaded ultra high pressure tube nipples in a variety of lengths for all standard tube sizes.

The coned and threaded ultra high pressure tube nipples are available in 316 stainless steel. See chart below for ordering information.

Special length coned and threaded nipples are available upon request. Consult Maximator for availability and price.

Standard nipples are not supplied with glands and collars, see Fittings on page 6 for these components.
See adjacent Tubing page 14, for pressure/temperature rating chart.

All dimensions are for reference only and subject to change.

Adapters and Couplings

» Pressures to 152,000 psi (10,500 bar)

MAXIMATOR designs and manufactures a wide variety of adapters and couplings in an array of styles and sizes. The adapters in this section are considered standard and readily available. Other materials and configurations are available upon request.

Adapters, Couplings & Accessories feature:

- Adapters & Couplings are 316 cold worked stainless steel material.
- Traceability is ensured by component laser etching, and through extensive documentation which includes: part number, pressure, material batch numbers, and connection type.
- Adapters are available in one or two-piece designs.
- Safety weep holes come standard on all pressure connections.
- All medium, high and ultra high pressure Adapters and Couplings come complete with glands and collars.

MAXIMATOR offers a complete line of standard high pressure adapters and couplings to compliment our valve line. Special design adapters and materials are available upon request.

Note: When selecting multiple items, the pressure rating would be that of the lowest rated component.

* The pressure rating of any adapter is the value of the lowest rated connection in the fitting.
Note: All Maximator adapters come standard in the "one-piece" design style. Adapters with the two piece design are available by adding a suffix -2P after the part numbers listed above. Both designs are identical in length, and are interchangeable with each other.

Adapters and Couplings

» Adapters (male to female)

Adapters (male to female)

Maximator male to female adapters allow the joining of male to female connections. The two connections can be a variety of tube or pipe connection types, with different size combinations possible.

All adapters are made of 316 cold worked stainless steel material; other materials are available upon request. Glands and collars are included with each female tube connection.

Adapters and Couplings

» Couplings (female to female)

Couplings (female to female)

Maximator couplings are female to female fittings that allow the joining of two different sizes and / or types of connections for a variety of size combinations. All couplings and adapters are made of 316 cold worked stainless steel material; other materials are available upon request. Glands and collars are included with each female tube connection.

» Instructions:

Find the male connection you want on the adapter in the „A“ column and the female connection of the adapter in the „B“ column. At the intersection of the two columns is the appropriate catalog number.

Adapters and Couplings

» Adapters (male to male)

Adapters (male to male)

MAXIMATOR male to male adapters allow the joining of two different sizes and / or type of tube or pipe female connections.

» Instructions:

Find the male connection you want on the adapter in the „A“ column and the male connection of the adapter in the „B“ column. At the intersection of the two columns is the appropriate catalog number.

Male Connection A			Male Connection B

Accessories

» Pressure gauges, transducers and high pressure hoses

MAXIMATOR has been designing and manufacturing high pressure equipment for more than thirty years and has a worldwide reputation for quality and reliability, backed by one of the best service organizations in the industry.

Accessories feature:

- pressure gauges up to max. 101,000 psi **(7,000 bar)**
- robust and safe pressure transducers up to max. 116,000 psi **(8,000 bar)**
- comprehensive range of HP hoses for max. 58,000 psi **(4,000 bar)**

Note: When selecting multiple items, the pressure rating would be that of the lowest rated component.

Pressure gauges and transducers

Pressure gauges

Maximator provides pressure gauges up to max. 101,000 psi (**7,000 bar**). Their connections are adjusted to the Maximator high pressure program (cf. the table below).

All pressure gauges are liquid damped and conform to accuracy class 1.0.

Pressure range psi (bar)	Catalog Number	Connection Type	Diameter in. (mm)	Accuracy class
14,500 (1,000)	3301.2107	1/2" BSP	2.48" (63)	1.0
14,500 (1,000)	3300.0152	1/2" BSP	3.9" (100)	1.0

36,000 (2,500)	3300.0153	4 H (9/16"-18 UNF)	3.9" (100)	1.0
58,000 (4,000)	3300.0167	4 H (9/16"-18 UNF)	6.3" (160)	1.0
87,000 (6,000)	3300.0168	4 U (9/16"-18 UNF)	6.3" (160)	1.0
101,000 (7,000)	3300.3251	5 U (5/8"-18 UNF)	6.3" (160)	1.0

Gauges with different pressure ranges, diameters and accuracy classes upon request.

Transducers

Maximator supplies robust and safe pressure transducers up to max. 116,000 psi (**8,000 bar**). Main features of the transducers are their high accuracy and good longevity. Output 0 to 10 VDC.

Pressure range psi (bar)	Catalog Number	Connection Type	Temperature	Accuracy class
36,000 (2,500)	3301.3656	4 H (9/16"-18 UNF)	-4°F to 170°F (-20°C to 80°C)	0.5
58,000 (4,000)	3301.3657	4 H (9/16"-18 UNF)	-4°F to 170°F (-20°C to 80°C)	0.5
116,000 (8,000)	3301.5029	M20 x 1,5 female	-4°F to 170°F (-20°C to 80°C)	0.5

High pressure hoses

» Pressures to 58,000 psi (4,000 bar)

High pressure hoses

Maximator provides a comprehensive range of HP hoses in high-quality thermoplastic synthetic materials. Pressure substrates are of steel and compatible materials. These flexible connections are suited for max. operating pressures of 58,000 psi (**4,000 bar**).

Upon request, Maximator also supplies HP hoses with glands and collars to make them fit for integration into high pressure systems up to 65,000 psi (**4,500 bar**). Hoses for other operating pressures and nominal widths as well connection combinations can be supplied upon request.

MAXIMATOR offers manual Coning and Threading tools that are designed to prepare accurate tubing ends to accept the medium, high and ultra high pressure connections.

Tools feature:

- Manual Coning and Threading Coning tools are designed to thread up to 9/16” OD tubing.
- One size Coning and Threading tool with interchangeable bushings and thread dies eliminates multiple tool inventories.
- Internal needle bearings and high strength materials offers ease of operation and extended tool life.
- Coning blades are designed to cut both the angle and straight areas to insure good concentricity between the sealing surfaces.
- Precision Reseating Tools to repair damaged female high pressure connections without full disassembly of components.

VFT-ToolBoXX Type CTTB

The MAXIMATOR VFT-ToolBoXX Type CTTB provides order and clarity for your coning and threading tools

The ToolBoXX is available in 3 versions:

- Complete:** tube dimension 1/4", 3/8" and 9/16" of the Medium, High and Ultra High Pressure series
- Medium Pressure:** tube dimension 1/4", 3/8" and 9/16" of the Medium series
- High Pressure:** tube dimension 1/4", 3/8" and 9/16" of the High and Ultra High Pressure series

By using a pre-formed foam inlay each tool has its defined place in the ToolBoXX:

- Coning tool, complete
- Collet chuck and cutting plate
- Threading tool complete and cutting oil
- Guide bushings and threading dies
- Deburring tool with 2 deburring heads
- Step-by-step instruction
- L-BoXX tool case, impact-resistant (ABS plastics)

- 1 Coning tool
- 2 Chuck key
- 3 Collet chuck
- 4 Coning Blades
- 5 Threading tool
- 6 Guide bushing & threading dies
- 7 Cutting oil 100 ml
- 8 Deburring tool
- 9 Deburring head ø10,4 & ø16,5 mm

Catalogue key	Connection Type	Description
CTTB-M-H/U	-M -H/U	Medium, High and Ultra High Pressure
CTTB-M	-M	Medium Pressure
CTTB-H/U	-H/U	High and Ultra High Pressure

Coning Tools

The coning tool comes complete with blades, collet and tools. The blades and tool feed nut allow the user to control the cutting feed rate and face the end of the tube when complete. The blades and collet can be changed for other sizes, while using the same base tool.

Tubing Size O.D. x I.D. in. (mm)	Tubing Pressure psi (bar) @ R.T.	Connection Type	Coning Tool Complete Catalog Number	Replacement Part Information

Reseating Tools

The reseating tool is designed to rework an existing damaged coned and threaded connection without full disassembly of the component. The reseating tool will resurface the sealing surfaces of the medium, high, and ultra high pressure connections up to 3/4" tubing.

Deburring Tools

The deburring tool is designed to remove the metal burr on the inside diameter of the tubing after the cutting process. The reseating tool will work on all medium, high, and ultra high pressure connections up to 9/16" tubing.

MAXIMATOR has been designing and manufacturing high pressure equipment for more than thirty years and has a worldwide reputation for quality and reliability. Our work is based on a certified quality management system (DIN EN ISO 9001) - the fundamental asset for successfully implementing technical knowledge and experience in the field of complex systems.

Product features:

- Maximator’s Quality Management System meets all requirements of DIN EN ISO 9001, TÜV Certification
- All valves, fittings and tubing are designed in accordance with the European Pressure Equipment Directive 97/23/EC.
- Pressure vs. Temperature chart for 316 cold worked stainless steel.

At Maximator our industry experience is unparalleled. Whether General Industrial, Oil & Gas, Water Jet, Chemical or Petrochemical applications, our teams of experienced engineers and highly trained professionals have worked in the high pressure industry for decades and are prepared to support your needs. Our guiding principles are safety, quality and dependability. Our comprehensive inventory will ensure quick delivery that is unmatched in today’s environment.

Note: When selecting multiple items, the pressure rating would be that of the lowest rated component.

Technical Information

The information in this section is presented as general data for assisting a user in the selection of valves, fittings and tubing for elevated pressure and/or temperature applications in liquid or gas plumbing systems.

Maximator's medium, high and ultra-high pressure valves, fittings and tubing are good for most services from light vacuum up to 152,000 psi, depending on the pressure series selected. Coned and threaded type tube fittings, standard on all Maximator valves and fittings, can be used for most liquids and gases including lighter gases such as Hydrogen and Helium.

Compatibility of the valve, fitting and tubing materials with the actual process fluid is ultimately the responsibility of the user.

Maximator can assist in applications but is not an authority on all process fluids. Some special applications such as Oxygen service require special cleaning and that option is available from Maximator.

Below is a reference chart showing the effects of pressure versus temperature of cold worked 316 stainless steel material.

Other factors such as creep resistance, packing design and materials, corrosion resistance, cyclic conditions, and other process variables may affect the use of components at elevated temperatures. Consult factory when operating above 800°F.

Pressure vs. Temperature Chart for cold worked 316 SS

Note: The above pressure temperature chart is for 316 cold worked materials, this chart does not account for the temperature rating of packing or o-ring material which could be the limiting factor. Contact factory for other material limitations.

1. Basic Information

Pipe systems play a central role in process technology and many other industrial areas. Most hydraulic systems designed for transporting fluids or gases work under complex operating conditions which is why the components and the screw connections need to satisfy exacting requirements.

Information about the document

The document provides the specialist with an overview of the technical data and assembly options of the MAXIMATOR valves, fittings and tubing.

This document looks at the respective functional principle of the components with all required application data. It also provides information about assembly, dismantling, maintenance and servicing.

The relevant accident prevention regulations and other generally accepted safety requirements must be complied with.

WARNING!

This combination of the symbol and signal word refers to possible hazardous situations that can lead to light, minor, major or even fatal injury if they are not avoided.

NOTE

This combination of the symbol and signal word refers to a possible hazardous situation that can lead to property and environmental damages if they are not avoided.

Tips and recommendations

This symbol highlights useful tips, recommendations and information for efficient and trouble-free operation.

2. High pressure fluid systems: operating conditions

The underlying conditions that need to be taken into account when designing fluid systems and selecting materials and components include the pressure levels, dynamic loads, high and low temperature, and the properties of the fluid.

High pressures of up to 10,500 bar and the dynamic loads, i.e. the alternating pressure exerted onto the components of a high pressure system, make exacting demands of the stainless steel that is used. These materials must have high strength and also be highly ductile. Another important criterion is the media-resistance of the materials. Therefore, austenitic stainless steel materials are usually used for tubing, fittings and valves.

It is recommended using autofrettage parts for applications that lie in the limit ranges of pressure resistance where dynamic loads are expected and therefore where the service life of the components must be optimised.

The process fluid also needs to be taken into account, because the components that transport light gases, such as hydrogen and helium, are much more difficult to seal than tubing carrying liquids, especially when they are pressurised.

Infobox Autofrettage:

Autofrettage (French.: Auto: self; frettage: creation of tensions) refers to a method for enhancing durability, in particular of pressure-cycle stressed components. Exerting a very high pressure (of up to 15,000 bar) into the part subject to internal pressure creates residual stress between the inner and the outer wall of the part that counters the premature failure due to fatigue breakage.

As a general rule: the higher the pressure range of a valve or fitting, the lower the probability of leaks for light gases. This principle also applies when selecting tubing because higher wall thicknesses for small pipe diameters provide better sealing surfaces.

Likewise, the choice of various components depends heavily on the fluid medium. Needle valves are much more suitable than ball valves for gases, and ball check valves are better for fluids and applications with high flow speeds. O-ring check valves are generally better suited for gases and applications with low differential pressures.

Assembly instructions and technical data

3. Handling of high pressure tubing

MAXIMATOR high pressure tubing are made of high-quality cold-worked stainless steels and are drawn without joints. They are used in all high pressure equipment, partially for extremely high pressures and for fluids and gases. Some aspects need to be taken into account when handling high pressure tubing:

- As the high pressure tubing are made of a cold-worked stainless steel they need to be protected against being heated to over 800°F (427°C) (see also Pressure vs. Temperature Chart for cold worked 316 SS on page 2 of this chapter). Heating above and beyond would weaken the material.
- For this reason, the high pressure tubing must not be welded or soldered.
- When bending tubing, the recommended minimum bending radii (see Attachment 13.4) need to be observed. A bending radius that is too small exerts excessive loads onto the tubing. Also, the cross-section of the high pressure tubing may not deform. No kinks may occur during the bending process. We recommend a bending tool with dies specific to the pipe diameter.

- Autofrettage tubing lose their better durability properties when shaped. Therefore, they may not be bent nor bent first before the autofrettage process.

The following figures show how to handle high-pressure tubing correctly:

4. Screw connections in fluid systems

All screw connections in fluid systems have the task of connecting components reliably without leaks. The systems primarily differ in the way they are sealed and the way they are connected to the pipe.

There are various screw connection systems available for modern hydraulic systems. In addition to pipe thread connections, cutting ring connections, clamping ring connections, flanged screw fittings or cone or threaded connections are used.

Selection criteria

Choosing a suitable screw connection system primarily depends on the pressure within the fluid system, however, the sealing method and its functional principle is also an important criterion: a differentiation is made between metallic and soft-seal systems.

Another aspect that needs to be taken into account, especially in the case of soft-sealing systems, is the property of the fluid. In addition, the temperature(s) of the fluid and the environment, flow parameters such as flow rate and fluid viscosity, space requirements and installation conditions, the tube bending procedure and various ambient influences also need to be considered.

In some cases, other requirements need to be considered when selecting the screw connection system depending on the application. The selection options are also extensively restricted by international standards, specifications defined by the operator or approval regulations. The following Table provides an overview of the screw connection systems often used in fluid systems and their applications:

Screw connection system	Application	Typical rated pressures
Pipe thread screw connection	Hydraulic- and pneumatic applications, mobile hydraulics	approx. 1.050 bar
Compression fitting	Tool and Construction machines	approx. 700 bar
Cutting ring screw connection	Process engineering, Ship-building and offshore	approx. 1.000 bar
Flanged screw fitting	General and heavy engineering	approx. 500 bar
Coned and threaded screw connection	High Pressure Hydraulic and Pneumatic, Test equipment	approx. 10.500 bar

If fluid systems need to be designed for high pressures of more than 1.000 bar or if pressure peaks in these ranges need to be taken into account, the use of the cone and threaded screw connection is almost obligatory. The reason why these so-called high pressure screw connections are used for rated pressure levels of up to 10,500 bar is connected to the type of seal and the force required. High pressure screw connections primarily comprise three components:

- **Specially processed tubing end**
A cone with an inclination of 58° and a left-handed thread (usually UNF) is cut onto the end of the tube.
- **Collar**
The collar is screwed onto the left-handed thread and serves force transmission.
- **Gland**
The gland serves to connect with the counter-piece into which a cone with an angle of 60° is cut. By screwing the pressure screw into the connection borehole with a defined torque, the tube/collar connection is pressed into the cone and mutually seal.

Structure of a high-pressure screw connection

» Assembly Instructions:

1. Insert the gland onto the tubing. Thread the left handed collar onto the tube until at least one or two threads are exposed from the tapered coned end.
2. Apply a compatible lubricant to the gland threads and the back side of the collar where it comes in contact with the gland. Also lubricate the tapered cone portion of the tube. This will help protect the sealing surfaces from galling during the assembly process.
3. Insert the tubing into the connection and tighten the assembly hand tight. Then use a torque wrench to tighten the connection to the appropriate value in the table of attachment 13.1. It is good practice to use an additional wrench to prevent the opposite connection from turning.

This type of connection ensures that the sealing surface between the tube and the counterpiece is as small as possible (In this way, the sealing force is kept as low as possible). To ensure that the connection does not tear in the event of a leak, there is a relief borehole in the counterpiece to which the tube is connected.

If the cone and threaded connections are used in systems in which external forces (e.g. vibrations) impact on the fluid system, the resulting torsion forces can release high pressure screw connections. Therefore anti-vibration screw connections are particularly recommended for these types of applications. The tables of attachment 13.1 and 13.2 state the prescribed torques for the respective screw connection type.

The torsion forces generated as a result of system vibrations are only absorbed by the cone and the collar in standard high pressure screw connections. Anti-vibration screw connections also have an additional collet. The clamping surface acts onto the outer diameter of the high pressure tube. This means that the surface that absorbs the torsion forces is significantly increased thereby preventing the screw connection from becoming loose.

Structure of an anti-vibration screw connection

» Assembly Instructions:

1. The High Pressure Anti-Vibration Collet Gland Assembly can be installed using the same procedure as the standard coned and threaded connection (see above steps 1 to 3 but with torque values of 13.2). The high pressure collet grips the tube when the connection gland is tightened.
2. When using the Medium Pressure Anti-Vibration Collet Assembly, the procedure is the same as that of the standard coned and threaded connection (see above steps 1 through 3) with the additional step below.
3. Once the Collet Body has been tightened to the appropriate torque value, use the torque wrench to tighten the Collet Gland to the appropriate value in the table of attachment 13.2. This will compress the Collet against the tube.

Assembly instructions and technical data

» Valves | Fittings | Tubing

5. Valves: Structure, types, accessories (drives) and use

Due to the fact that high or low temperatures and fast heating or cooling speeds can impact on the sealing capability of the metal seals, the valve series should be selected after taking into account both the pressure resistance and also the static and dynamic temperature conditions. As a general rule: the smaller the sealing surface, the higher the temperature resistance. The following shows the types, design, the differences and the application ranges of these functional parts.

In the high pressure valve field a differentiation is made between needle valves and ball valves. Whilst needle valves are available for applications of up to 10,500 bar, ball valves are only designed for maximum 1.500 bar.

Figure 1

Figure 1 shows the structure of a needle valve. This valve is a 2-way angle valve with a replaceable valve seat. Also available are 2-way straight valves, 3-way valves with one or two pressure inlets and 3-way valves with 2-Stem for the pressure ranges Medium Pressure (1,550 bar) and High Pressure (4,500 bar).

The 2-way straight valves, 2-way angle valves and 3-way / 2-way pressure inlets are available for applications in the Ultra High Pressure (7,000 bar) range.

Figure 2 shows all components of the example valve 65V4H081. It is a straight valve. Depending on the specified pressure range, adjustments can be made regarding the seal packing. (For more information, see chapter 5.2)

When choosing for the application, it is not only the options that relate to the extreme temperature conditions that are important but in particular the shape of the valve spindle. Here, a differentiation is made between three different spindles (see table below):

Stem Type	Description	Use
V-stem	On/Off stem	Shutoff valve
Regulation stem	Conical stem tip	Throttle valve/shutoff valve
Micrometer stem	Fine dosage valve also with micrometer scale	Dosing of small reproducible flow rates

Figure 2

Important design features of the needle valves are the non-rotating stem and the metal-on-metal seal. The non-rotating stem effectively reduces the wear on the tip of the stem and the seat because the rotational movement when activating the valve is not transferred to the stem in a positive-lock manner. The metal-on-metal seal ensures high protection against corrosion and high durability.

Figure 3

Ball valves are available as 2-way and 3-way model and are designed for closing/opening applications. The 3-way model is also available as a 90° switch and also 180° switch version (middle setting closed) (see also Fig.3). Compared to 2-part stem, ball valves with trunnion mounted, single-part valve stems prevent shear fracture and also reduce the impact of lateral forces.

5.1 Repair of seal and valve stems

If you detect leaks in ball valves, they will need to be repaired by trained specialists. Independent repairs are not advisable due to the construction situation. If the manual valve starts to leak, follow the defined steps to seal the valve again correctly.

NOTE

The minimum and maximum allowed temperature ranges of the suitable seals, screw connections or materials are stated in the Temperature Table on page 2 of this chapter.

Check seals and adjust if necessary

1. Depressurise the valve and remove it from the fluid system.
2. Ensure that the valve stem is in the fully open position.
3. Release the lock plate of the packing pressure screw
4. Attach the valve securely and tighten the packing pressure screw to the value stated in the product catalogue using a torque wrench. If you do not have a torque wrench, tighten the packing pressure screw by turning 1/16 of a turn.
5. Exert maximum pressure onto the valve to check the valve for leaks.

Compared to the needle valves, ball valves have the advantage of faster actuation. Also, it is visible from outside at all times whether the valve is closed or open. A disadvantage is the sealing functionality. The use of ball valves for e.g. light gases is therefore not recommended.

There are pneumatic valve drives for automatic actuation of the manual valves. Depending on the application, drives of the type 'Normal closed' or 'Normal open' are used for needle valves. There are pneumatic and also electrical drives available for the ball valves.

actuator
(normal open)pneumatic
actuator
(normal closed)electrical
actuator

Needle Valves

Ball Valves

6. If there are still leaks on the valve seat or the packing, completely relieve the valve and repeat steps 4 and 5. If the seal still does not seal correctly after a few further attempts, the stem or possibly the seal need to be replaced. (See the paragraph below)
7. If the system is tight again, install the packing pressure screw and locking plate as specified.

Replace the seals or the valve stem

1. Repeat the upper steps 1-3 again.
2. Attach the valve securely and loosen or remove the packing pressure screw. The seal is automatically removed if the stem tip has a diameter larger than the seal parts. This applies to stems of the series 1/2" upwards. The seals need to be removed separately in the case of smaller valves.
3. MAXIMATOR manual valves are available with various stem models: single-part rotating/non-rotating; two-part stem [optionally with replaceable seat]. When replacing single-part non-rotating stems steps 4 to 7, two-part non-rotating spindles steps 8 to 9 and for rotating stems step 10.

Single-part non-rotating stems:

4. In the case of valves less than 1/2", the seal packing that comprises a collar, sealing ring and support ring must be removed. Replace the seal packing and insert into the valve body. If the stems does not need to be replaced, also screw the packing pressure screw into the body of the valve and tighten it to the torque stated in the document.
5. Remove the handle from the stem by releasing the threaded pin with an Allen key. Then unscrew the stem from the packing pressure screw. Now remove the two hex nuts and the sliding disk on the upper part of the stem. Dismantle the existing part into its three components. To do this, pull the stem screw and the second sliding disk from the stem. In the case of valves with a larger stem tip, the pressure ring and seal also need to be removed. (see also Fig. 4)
6. Clean the sliding disks and all surfaces that come into contact with the sliding disks with a clean cloth. Use a non-hardening lubricant and lightly coat the surface of the slide ring and the threads of the stem screw.
7. In the case of stems with large stem tips, place the lower sliding disk, the seal and the sealing rings into the stem. The following applies to all other valves: start with the lower sliding disk and place this onto the stem before you connect these two parts with the stem screw.

Now place the second sliding disk onto the stem screw. Then screw the first hex nut against the upper sliding disk and thread the stem completely into the packing pressure screw. Insert the packing pressure screw into the body of the valve and tighten to the torque stated in the document. Open the valve completely. Turn back one turn to achieve a little clearance. Now tighten the hex nut by hand and turn about 1/8-turn further with a wrench. In the next step, the second hex nut is inserted and also tightened by hand. Now hold the upper hex nut tight and release the lower hex nut from the sliding disk. Lock the lower hex nut with a 1/16-turn against the upper hex nut. Finally, place the hand piece onto the stem and connect both with each other by turning the threaded pin into the designated surface of the stem screw. (Caution! Do not turn too far). To achieve a non-rotating stem, the clearance between the stem screw and the shaft must be retained. The handle should have a maximum free travel of 10°. If the clearance is too large, the handle will need to be removed again and the upper hex nut loosened. Tighten the lower hex nut against the sliding disk. Attach the upper hex nut in compliance with the instructions above and check the system for clearance.

If the defined free travel is satisfied, you can attach the handle again as described above. In a final step, the locking plate must be mounted.

Figure 4

Two-part non-rotating stems:

8. In the case of valves with high or low temperature modifications, the sealing rings and the seal can be replaced. If a smaller stem is used, the casing and the support ring need to be removed from the old stem and attached to the new stem. Then place the lower sliding disk, the seal and the sealing washer onto the smaller stem. Then join the smaller stem to the larger one.
9. Use a non-hardening lubricant with a high percentage of solid lubricant (recommendation: pastes such as OKS 245) for the threads of the stem screw. Then screw the stem screw completely to the packing pressure screws or the valve seat so that the stem is in an open position. Whilst the casing is firmly clamped in a vice, tighten the packing pressure screw with the torque stated in the document (see chapter 7) and then tighten the lock nut. Use silicone grease or a similar lubricant for the sealing surfaces of the support rings. Also coat the threads with a non-hardening lubricant with a high percentage of solid lubricant (recommendation: pastes such as OKS 245) before screwing the casing into the body of the valve. Please note the torques stated in the document (see attachment 13.3) and then secure the casing with the lock plate.

Rotating stem:

10. Remove the handle from the stem and release the stem from the packing pressure screw. Use a non-hardening lubricant with a high percentage of solid lubricant (recommendation: pastes such as OKS 245) for the threads of the new stem and screw these completely into the packing pressure screw. Align the threaded pin with the stem so that it engages on the flat surface of the stem and then screw the handle tight. Together with the inserted lower sliding disk, the seal and the sealing washer in the body of the valve, the packing pressure screw can be tightened to the torque stated in the document (see attachment 13.3). Finally, mount the locking plate.

Replacement of the valve seat

1. Depressurise the valve and remove it from the fluid system. Ensure that the valve stem is in the fully open position.
2. Remove the seat holder whilst the valve body is firmly clamped into place.
3. Remove the old seat and replace if necessary.
4. Use silicone paste or a similar lubricant for all sealing surfaces of the seat. Use a non-hardening lubricant with a high percentage of solid lubricant (recommendation: pastes such as OKS 245) for the threads of the seat holder.
5. Replace the seat and the seat holder. Ensure that the seat is placed flush on the body of the valve. Tighten the seat holder.

Figure 5

5.2 Seal: Structure and composition of the standard packing

The sealing material used are generally PTFE and carbon sealing washers with a metallic or plastic back up. However, the packing can be adapted in a number of ways depending on the purpose of the valves. The item numbers of the packing are stated in the technical drawings or can be requested from MAXIMATOR GmbH.

Figure 6: Sealing washer (middle) and back up washers (example 21V9M packing)

Figure 6 shows the components of a packing of the valve series 21V9M. The middle ring (black) is a sealing washer. These all look the same for all packing and are made of PTFE and carbon. Only the dimensions of the sealing washers vary depending on the valve series. On the outside you can see both back up washer variants. On the right (shiny) is a metallic back up washer (material 1.4404 [316L]) and on the left (white) a plastic ring (material PEEK).

All technical and dimensional information subject to change. All general Terms and Conditions of sale, including limitations of our liability, apply to all products and services sold.

Depending on requirements, the compositions of the back up washers may vary for different valve series.

During assembly ensure that the sealing washer is always located between the pressure ring and at least one back up washer. The sealing washer can therefore never form the last part of the packing. (Exception 22V...-SOG & 36V series)

In some cases the sealing washer is surrounded by two back up washer. (See also Fig.7 & Fig.8)

Figure 7: Spindle with packing single (example 21V4M /21V6M)

Figure 8: Spindle with packing together (example 21V4M /21V6M)

Assembly instructions and technical data

» Valves | Fittings | Tubing

NOTE

! The back up washer that make up the closure of the seal packing, i.e. those closet to the stem tip, must always be mounted with the chamfered side facing the stem tip.

One special case involves packing of the valve series with borehole diameters of 3/4" (12M) and 1" (16M). In this case, two sealing washer are used and all parts are delivered as ,serrated'. The design is shown in figures 9 to 11.

6. Functional principle and technical data

	Needle Valves	Ball Valves
Method of functioning / Use	Pressure-sealed shutting off of liquids and gases	
Type of load	Valves are designed for static loads. Life expectancy of the valves is reduced under dynamic load conditions.	
Media temperature	-50°C up to +230°C (-60°F up to +450°F) Max. pressure drops with rising temperature. (see P/T diagram)	-20°C up to +150°C (-4°F up to +302°F) Max. pressure drops with rising temperature. (see P/T diagram)

	Air actuated Y.NO, Y.NC - Valves	Air actuated valves
Method of functioning / Use	Designed or pressure-sealed shutting off of fluids and gases. The valves are operated through pneumatic cylinders. 3/2-way pneumatic valves are recommended as drive units.	
Type of load	Valves are designed for use under static loads. Use under dynamic loads will reduce the valves' life expectancy.	
HP media	Please consult factory for further information.	
Drive media	Valve selection may only be performed with compressed air or an inert gas until a pressure of 10 bar.	
Media temperature	For the Actuator: -30°C up to +95°C (-22°F up to +203°F)	For the Actuator: -30°C up to +80°C (-22°F up to +176°F) -50°C up to +150°C (-58°F up to +302°F) for the HP-sealing Max. pressure decreases with rising temperature.
Max. air drive pressure	See table for the corresponding valve type	
Material of air actuator	anodized aluminum	
Air connection	1/8 NPT female

	Check Valves	Disc-, Cup-Type-, Angel-Filter, Filterinlets
Method of functioning / Use	Used to shut off flow in one direction and for pressure-sealed conveyance of liquids and gases	Filters collect solid matter particles from passed through fluids and gases. The maximum filter differential pressure is 10 bar. The characteristic filter curves indicate maximum throughput rates. Please, note that the differential pressure rises with increasing soling. Hence, replace filter cartridges in good time.
Type of load	Designed for static loads. Life expectancy of the valves is reduced under dynamic load conditions.	
Media temperature	O-ring non-return valve: FKM O-ring: -20°C up to +200°C (-4°F up to +392°F) NBR O-ring: -50°C up to +100°C (-58°F up to +212°F) Ball-type non-return valve: -200°C up to +350°C (-330°F up to +662°F)	-252°C up to +350°C (-423°F up to +662°F) Max. pressure drops with rising temperature. (see P/T diagram)
	Caution: Selection of the O-ring depends on the media to be used! Max. pressure drops with rising temperature. (see P/T diagram)	

	Fittings, Adapter	High Pressure Connections
Method of functioning / Use	Pressure-sealed conveyance of liquids and gases	Pressure-sealed connection of HP components, plugs for pressure-sealed closing of HP connections.
Type of load	Designed for static loads. Life expectancy of the reducing pieces is reduced under dynamic load conditions.	
Media temperature	-252°C up to +650°C (-423°F up to +1200°F) Max. pressure drops with rising temperature. (see P/T diagram)	-20°C up to +150°C (-4°F up to +302°F) Max. pressure drops with rising temperature. (see P/T diagram)

	Rupture disks
Method of functioning / Use	The MAXIMATOR rupture disks are only designed for use in MAXIMATOR safety head assemblies with the collar safety heads 3771.1092 or 3781.1092.
Orifice	¼" (6.35mm)
Rupture range	See type plate
Temperature	-73°C to +350°C (-100°F to +660°F) - bursting pressure in relation to 20°C
Type	flat to 600 bar or hat-shape from 600 bar

Assembly instructions and technical data

» Valves | Fittings | Tubing

7. Installation

7.1 Needle valves & ball valves

Valve (for front panel installation):

1. Release threaded pin, pull operating handle from the stem.
2. Dismantle cylinder screw and lock plate.
3. The manual valve can now be attached in a front plate using the cylinder screw. The installation position can be selected freely (if necessary a longer cylinder screw may be required for thicker front plates).
4. Insert operating handle onto the stem screw again and tighten using the threaded pin with max. 8 Nm for 1/4", 3/8" and 9/16" 4500bar (thread M8); 12 Nm for 9/16" 1550 bar, 5/16", 3/4" and 1" (thread M10).

NOTE

Securing the manual valve on the two designated attachment boreholes is always recommended (except for front panel installation), because otherwise the screw connections could become loose when the valve is actuated.

Assembly of high pressure tubes:

1. Slide the glands over the HP tube.
2. Screw on the collar up to the end of the thread and turn back by one turn (left-handed thread). It should be noted that 1-2 threads should be left exposed between the sealing cone and the collar.
3. Screw the gland into the body connection drill hole and tighten with the specified torque according to the below table.

NOTE

If possible (and if the medium allows it), use a suitable lubricant (e.g. copper paste) for all threads and sealing cones!

Tightening torque for pressure screws:

Pressure connection bar	Tube connection dimensions Inches	O.D. Tube mm	Gland Wrench size (WS) Inches (mm)	Torque value Nm
1050	1 1/2	38.1	1 7/8 (47.63)	275
1550	1/4	6.35	1/2 (12.7)	28
	3/8	9.53	5/8 (15.9)	41
	9/16	14.30	15/16 (23.8)	75
	3/4	19.05	1-3/6 (30.2)	122
	1	25.40	1-3/8 (34.9)	204
2500 / 4500	1/4	6.35	5/8 (15.9)	34
	3/8	9.53	13/16 (20.6)	68
	9/16	14.30	1-3/16 (30.2)	150
7000	1/4	6.35	5/8 (15.9)	34
	3/8	9.53	13/16 (20.6)	68
	9/16	14.30	1-3/16 (30.2)	150
10500	5/16	7.94	3/4 (19.05)	95

(The torques may vary slightly for various lubricants.)

7.2 Pneumatically controlled Y.NO and Y.NC valves

The side boreholes (Ø 7 mm) in the yoke are intended for assembly of the valves.

NOTE

Securing the manual valve on the two designated attachment boreholes is always recommended (except for front panel installation), because otherwise the screw connections could become loose when the valve is actuated.

7.3 Disk, cup type and angle filters

During assembly, check the direction of flow. The angle filter should be installed so that the filter element can be replaced from below.

7.4 Fittings

Bulkhead fitting:

1. Release the hex nut from the screw connection.
2. Push the screw connection through the borehole (borehole diameter as stated in table below).
3. The re-tighten the hex nuts.

Type	Bore-hole diameter Inches (mm)
15BF24M	2.4 (61)
21BF4M	0.81 (20.6)
21BF6M	0.94 (23.9)
21BF9M	1.12 (28.5)
21BF12M	1.37 (34.8)
21BF16M	1.68 (42.6)
43BF16H	1.68 (42.6)
65BF4H	0.94 (23.9)
65BF6H	1.12 (28.5)
65BF9H	1.43 (36.3)
101BF4U	0.94 (23.9)
101BF6U	1.12 (28.5)
101BF9U	1.43 (36.3)
152BF5U	1.43 (36.3)

7.5 High-pressure screw connections

Plugs:

1. Push the plug into the gland.
2. Screw gland into the body connection and tighten with torque stated in the table: Tightening torque for pressure screws.

7.6 Rupture disks

Check the rupture pressure prior to rupture disk installation. To this end, the rupture pressure as indicated on the rupture disk must be compared to the value stated on the type plate. Sealing surfaces shall be inspected prior to assembly, if you wish to replace a rupture disk or want to place it in a used safety head assembly. Only intact surfaces ensure proper function of components. Defective parts must be replaced. Also check the internal diameter of the hold-down ring. The borehole must lie within a tolerance range of $6.35 \text{ mm} \pm 0.02 \text{ mm}$. In case of deviation, replace the pressure piece.

NOTE

A deformed hold-down ring results in rupture pressure modifications. Depending on rupture disk design (flat or hat-shaped) the rupture disk shall be assembled in front of or behind the hold-down ring.

Figure 12: Rupture disk forms

The tightening torque for the hold-down nut based on a thread treated with lubricant paste is indicated on the rupture disk type label. Figure 12 shows the two rupture disk forms. This is a flat or hat-shaped rupture disk that can be used depending on the pressure requirements.

NOTE

An unsuitable tightening torque results in leakages and modifications of rupture pressure. If possible (and if operating conditions allow), use a suitable lubricant (e.g. copper paste) for all threads and sealing cones.

8. Deinstallation

Dismantling takes place in the reverse order of assembly.

NOTE

Ensure that the system is depressurized before dismantling.

Assembly instructions and technical data

» Valves | Fittings | Tubing

9. Maintenance

MAXIMATOR valves, fittings and tubing are generally maintenance-free.

Exceptions are the MAXIMATOR filters. The filter elements need to be replaced when soiled. A suitable interval for the regular exchange of the filter elements must be defined by the operator.

10. Maintenance and repair

Only qualified personnel may carry out repairs.

10.1 Needle valves, ball valves & pneumatic valves

Only qualified personnel may carry out repairs.

WARNING!

The NC valves have a tension spring and this must be released before opening the air drive. The spring may only be relieved and tighten when the valve is actuated (open position).

Fault	Possible cause	Remedy
Valve won't close	Stem and/or seat or ball seal faulty	Replace the stem. Replace the seat or body or ball seal
Medium escapes from the relief borehole at the Pressure connections	Incorrect assembly of the pressure connection	Check assembly.
	Cone surface damaged.	Rework the cone surface with the deburring tool or rework the pipe.
Medium escapes from the relief borehole during packing	Initial pressure on the packing seal is too low.	Packing gland must be adjusted to the respective torque value.
	Packing and/or stem damaged.	Exchange the damaged components.

All parts of the valves can be purchased as spare parts from MAXIMATOR GmbH. You will find the order numbers on the drawing included with each valve. Due to the fact that more than one seal or component is generally worn, we have created spare part kits. The composition of the spare parts kits should be taken from the drawings where the corresponding order numbers can also be found.

When ordering spare parts, please state the order code and valve type that are printed on the valve body. We can also carry out repairs in our factory. Our qualified service technicians are available to help you.

Torque for packing gland:

Valve Type	Connection	Torque value
bar	Inches	Nm
1050	1½	50
1550	1/4	41
	3/8	41
	9/16	82
	3/4	150
	1	200
2500	1/4	61
	3/8	61
	9/16	61
4500	1/4	48
	3/8	48
	9/16	48
7000	5/16	82

10.2 Non Return valve

All parts of the non return valves can be purchased as spare parts from MAXIMATOR GmbH. When ordering spare parts, please state the order code and valve type that are printed on the return valve body. We can also carry out repairs in our factory. Our qualified service technicians are available to help you.

Fault	Possible cause	Remedy
The media leaks at the release drill hole for pressure connections.	Incorrect assembly of the pressure connection	Check assembly.
	Cone surface damaged.	Rework the cone surface with the deburring tool
Medium flows in shut-off direction	Seal / seat faulty	Replace seal / seat

10.3 Disc Line Filters

Before removing the filter elements, the filter must be dismantled as described below.

Removal of the filter element:

1. Release gland and removes with the plugs.
2. Press all filter elements with a plastic mandrel out of the

body of the filter.

3. Push the filter body over the caulking anvil. Direction of flow toward the caulking anvil.
4. Place the finer filter elements into the body of the filter first, and then caulk with the Maximator caulking mandrel and several hammer strikes.
5. Use a lamp to check if the filter leaks. If a gap of light is visible, the filter element needs to be compressed more strongly.
6. Place the distance washer into the filter body.
7. Insert the coarser filter washer and caulk.
8. Replace the plugs and pressure screws again.
[200 Nm at 9/16" 1550 and 4500 bar;
150 Nm at 1/4" and 3/8" 4500 bar]

Figure 13: Structure of a disc filter

Fault	Possible cause	Remedy
Medium escapes from the relief borehole at the Pressure connections	Incorrect assembly of the pressure connection.	Check assembly.
	Cone surface damaged.	Rework the cone surface with the deburring tool

All parts of the disk filter can be purchased as spare parts from MAXIMATOR GmbH. When ordering spare parts, please state the order code and filter type that are printed on the filter body.

We can also carry out repairs in our factory. Our qualified service technicians are available to help you.

10.4 Cup-Type Line Filters

Before removing the filter elements, the filter must be dismantled as described below.

Removal of the filter element:

1. Loosen gland and remove with the filter seat.
2. Pull old filter element from the filter seat

3. Insert a clean filter element and knock lightly into the filter seat with a plastic hammer.
4. Re-insert the filter seat and screw-in the gland. [200 Nm at 9/16" 1550 and 4500 bar; 150 Nm at 1/4" and 3/8" 4500 bar ; 100 Nm at 1/4" and 3/8" 1550 bar]

Figure 14: Structure of a cup/type filter

Fault	Possible cause	Remedy
Medium escapes from the relief borehole at the Pressure connections	Incorrect assembly of the pressure connection.	Check assembly.
	Cone surface damaged.	Rework the cone surface with the deburring tool

All parts of the cup-type filter can be purchased as spare parts from MAXIMATOR GmbH. When ordering spare parts, please state the order code and filter type that are printed on the filter body.

We can also carry out repairs in our factory. Our qualified service technicians are available to help you.

10.5 Angle filter

Remove the filter element without dismantling the entire filter from the pressure system (angle filter):

1. System must be depressurized.
2. Loosen gland and remove with the plug.
3. Loosen the old filter element carefully with a small screwdriver and remove.
4. Insert a clean filter element and knock lightly into the filter seat with a soft mandrel (plastic).
5. Re-insert the plug and screw on the gland with 150 Nm.

Figure 15: Structure of a angle filter

Fault	Possible cause	Remedy
The media leaks at the release drill hole for pressure connections.	Incorrect assembly of the pressure connection	Check assembly.
	Cone surface damaged.	Rework the cone surface with the deburring tool

All parts of the disk filter can be purchased as spare parts from MAXIMATOR GmbH. When ordering spare parts, please state the serial number, order code and filter type that are printed on the filter body.

We can also carry out repairs in our factory. Our qualified service technicians are available to help you.

10.6 Fittings & adapters & high-pressure screw connections

Fault	Possible cause	Remedy
The media leaks at the release drill hole for pressure connections.	Incorrect assembly of the pressure connection	Check assembly.
	Cone surface damaged.	Rework the cone surface with the deburring tool

All parts of the fittings can be purchased as spare parts from MAXIMATOR GmbH. You will find the order numbers on the drawing included with each fitting. Due to the fact that more than one seal or component is generally worn, we have created spare part kits. The composition of the spare parts kits should be taken from the drawings where the corresponding order numbers can also be found.

All technical and dimensional information subject to change. All general Terms and Conditions of sale, including limitations of our liability, apply to all products and services sold.

11. Coning and Threading Tools

Functional principle / use:

The MAXIMATOR coning and threading tools must only be used for the finishing of high-pressure tubing.

Most parts of the coning tool are identical for the various high-pressure connections. Only different collets and cutting plates need to be used.

The threading tools for the 1550 bar 4500 bar and 7000 bar series are identical. Only the guide bushes and dies need to be re-placed for the various tubing diameters.

Products for Sour Gas Applications
Pipe Valves
to 15,200 psi (1,050 bar)

Customized Solutions
Ball Valves
to 21,000 psi (1,500 bar)

11.1 Component parts and configuration of the coning tool

11.2 Single parts and structure of the thread cutting tool

Assembly instructions and technical data

» Valves | Fittings | Tubing

11.3 Preparation of the coning tool

Disassembly

Remove the knurled nut by unscrewing from the base structure.

Use the supplied hexagonal offset screwdriver to loosen the headless set screw that keeps the crank handle in its position.

Remove crank handle, knurled nut and needle bearing by pulling from the blanking die holder.

Loosen the 4 headless set screws in the blanking die holder to disassemble the blanking dies. Then remove the blanking from the blanking die holder.

Unscrew the tensioning nut from the base structure. Then push the collet chuck out of the tensioning nut.

Assembly

Push the collet chuck into the tensioning nut.

Assembly instructions and technical data

» Valves | Fittings | Tubing

Slightly grease tensioning nut and collet chuck and screw them onto the base structure.

Insert the blanking dies into the blanking die holder as shown in the illustration. Make sure that the labelled order code is always on the outside.

Use the hexagonal offset screwdriver to slightly tighten the headless set screws to align the blanking dies. Make sure to first tighten the headless set screws located opposite the cutting edges (see sequence in the illustration). Thus, the blanking dies with cutting edges fit closely to the blanking die holder. Otherwise the processed taper surface may be uneven.

Lubricate the needle bearings with roller bearing grease.

Stick the components onto the blanking die holder in the following sequence: Needle bearing -> Knurled nut -> Needle bearing -> Crank handle

Align the crank handle and blanking die holder in such a manner that the head-less set screw of the crank handle pushes onto the key area at the shaft of the blanking die holder.

Press the components together by hand and tighten the headless set screw.

Avoid any tangible longitudinal play between crank handle, needle bearings, knurled nut and blanking die holder. A clearance between the components may result in an uneven taper surface.

Assembly instructions and technical data

» Valves | Fittings | Tubing

Lubricate the threads of knurled nut and base structures (We recommend use of solid lubricant, such as copper paste).

Lubricate the running surface of the blanking die holder.

Insert the blanking die holder into the base structure and screw the knurled nut on with a few rotations. Now the coning tool is ready for use.

11.4 Cutting pipework to length

The pipe length is the result of the clear distance of the components to be connected plus the allowance for each connection as shown in Table 2.

For processing the face sides, add another 0.5 mm for each end.

Pipe length = Distance + 2 x allowance + 2 x 0.5 mm

Cut the pipe to the desired length and deburr on the outside so that it can be inserted into the collet chuck of the tapering tool.

11.5 Cut the cone

Clamp the coning tool on the fixing plate in a vice or similar.

Assembly instructions and technical data

» Valves | Fittings | Tubing

Turn out the knurled screw until only approx. 2 – 3 thread turns are gripping. This corresponds to a distance of 20 mm between knurled nut and the step of the base structures.

Insert the pipe into the collet chuck. Push forward till to the cheek and pull backward for approx.1 mm

Tighten the tensioning nut with the chuck key. Make sure that all 4 springs of the chuck keys are gripping the tensioning nut slots.

Apply cutting oil onto the blanking dies and pipe end through the side opening in the base structure. Repeat several times during the cutting operation.

Turn the crank handle in clockwise di-rection and simultaneously provide a slow advance with the knurled nut. Advancing without simultaneous „cranking“ can destroy the blanking dies. To ensure that the taper is completely cut the rotations of the knurled nut can be counted or the advance measured. The number of required rotations corresponds to the necessary advance in mm and can be gathered from the Table: Assembly instructions cone processing (see point 11.8). When ending the cutting operation and in order to obtain a smooth surface turn the crank handle evenly and continuously and reduce the advance speed with the knurled nut. Then stop the advance and continuously perform 3-4 rotations of the crank without moving the knurled nut. Slowly turn back the knurled nut. Thus, an in-dentation of the blanking on the taper is avoided.

Use the chuck key to loosen the tensioning nut and the tube can be re-moved from the coning tool.

Assembly instructions and technical data

» Valves | Fittings | Tubing

The finished pipe can be recognised by the completely machined face side of the pipe. The taper surface must be free from any damage, such as indentations or scratches. If this is not the case, the pipe can simply be re-cut.

The only work left to do now is debur-ring of the internal diameter of the finished pipe. Carefully remove all chips that are generated by taper cutting edges and deburring (inside and out-side).

11.6 Preparation of the threading tool

Screw the handles into the tool body.

Insert the die stock and guide bush into the tool body and secure with headless set screws. Align the components in such a manner that the headless set screws grip into the recesses.

11.7 Threading

Clamp the high-pressure tube with the finished cones. We recommend protective jaws made of aluminium.

Wet the pipe and the die with cutting oil.

Assembly instructions and technical data

» Valves | Fittings | Tubing

Place the threading tool with guide bush on top of the tube.

Slightly press down the tool and start the threading operation (in counter-clockwise direction). Rotate the tool briefly in clockwise direction during the threading process in order to break the chip and apply more cutting oil.

See Table 7 (Point 11.8) for the length of the thread. Chips created when cut-ting the thread must be removed carefully (inside and outside).

14. Flow Calculations - Example of a high-pressure fluid system design

When designing high-pressure fluid systems, the most important variables are the flow (flow rate), flow speed and pressure loss.

The flow Q is usually determined from the requirements of the application. The flow speed v plays a controlling function in the design and protects the overall system from impermissible statuses.

If the flow speeds are too high in high-pressure pipe systems, this can lead to premature wear of components (in particular the sealing surfaces). Therefore, the limit value for flow speeds when dimensioning pipe systems with gaseous fluids is 10-15 m/s and for fluids 5-7 m/s.

When designing the pressure generator it is important that the pressure loss Δp is taken into account along the entire pipe system. This therefore guarantees that the pipe equipment has no further impact on the respective requirements of the application.

The following is an example design. The application makes the following requirements of the system:

Flow	$Q = 0,5 \text{ m}^3/\text{h}$
Pressure range	$p = 1,000 \text{ bar}$
Fluid	Water
Pressure loss	$\Delta p = 2 \text{ bar}$
Density of fluid	$\rho = 1 \text{ kg/dm}^3 \text{ (at } T = 20^\circ\text{C)}$

The valve design work starts with the dimensioning process. The flow coefficient has proven an important dimensioning ratio. The flow coefficient K_V defines, for all valves, the water flow in m^3/h at room temperature of an open valve and simultaneous pressure loss of $\Delta p = 1 \text{ bar}$.

The C_V value is usually used in the USA. (US gallons/min at $\Delta p = 1 \text{ psi}$)
The following conversion formula is used: $K_V = 0.86 * C_V$

The following formula is used to calculate the minimum K_V value of the example application:

$$K_V = Q * \sqrt{\frac{1 \text{ bar}}{\Delta p} * \frac{\rho}{1000 \text{ kg/m}^3}}$$

As the medium used is water, the last term under the root is omitted. Therefore:

$$K_V = Q * \sqrt{\frac{1 \text{ bar}}{\Delta p}}$$

$$K_V = 0,5 \text{ m}^3/\text{h} * \sqrt{\frac{1 \text{ bar}}{2 \text{ bar}}} = 0,35 \text{ m}^3/\text{h}$$

Conversion of K_V in C_V :

$$C_V = \frac{K_V}{0,86} = 0,4 \text{ m}^3/\text{h}$$

The selected valve should therefore not undercut a K_V value of 0.35 m^3/h . Please note here that most stated flow coefficients K_V refer to straight-way valves. The flow coefficients for angled valves may be increased by up to 50%.

In this case, a 3/8" valve of the Medium Pressure Series offers a K_V value of 0.64 ($C_V = 0.75$). The matching valve is **21V6M071**.

Usually the pipe size (inner diameter) is also specified together with the valve dimensions based on the flow coefficient. However, we recommend checking this paying special attention to the flow speed.

The following formula is used to determine the minimum required inner pipe diameter ID:

$$ID = \sqrt{\frac{Q}{3600 * v} * \frac{4}{\pi}}$$

$$ID = \sqrt{\frac{0,5 \text{ m}^3/\text{h}}{3600 * 7 \text{ m/s}} * \frac{4}{\pi}} = 5,03 \text{ mm}$$

According to the calculation for the example application, a pipe with an inner diameter of at least 5.03 mm must be selected.

The 3/8" high-pressure pipe and its inner diameter of 5.17 mm satisfies the requirements and therefore confirms the dimensions of the valve.

Statement on ATEX Directive 2014/34/EC

The scope of the directive 2014/34/EC also includes non-electrical equipment and components to be used in potentially explosive atmospheres which have their own source of ignition.

Maximator manufactured items:

Manual valves of 15-, 21-, 22-, 30-, 36-, 65-, 101- series,

Fittings of 10-, 15-, 21-, 30-, 36-, 65-, 101-, 152- series,

Filters of 15-, 21-, 30-, 65- series,

Check valves of 15-, 21-, 30-, 65-, 101- series,

Tubing of 15-, 21-, 30-, 36-, 65-, 101- series

Providing it is used as intended none of the items have its own potential source of ignition.

Therefore they do not fall in the scope of the directive 2014/34/EC and can be used in all explosion zones without declaration of conformity.

Customized Solutions

MAXIMATOR has been designing and manufacturing high pressure equipment for more than thirty years and has a worldwide reputation for quality and reliability, backed by one of the best service organizations in the industry.

Customized Solutions:

- Gauge Valves
- Bleed Valves
- Block and Bleed Valves
- Hydraulic Valve Actuator
- Safety and shut-off manifold
- Sampling Bottle Valves
- Manifold Valves
- Certification, Material Traceability and Custom Test Requirements

Note: When selecting multiple items, the pressure rating would be that of the lowest rated component.

Customized Solutions

Gauge Valves

Maximator gauge valves are mainly used to isolate the instrumentation such as pressure transducers or gauges from the process.

The GV series from MAXIMATOR is rated up to 36,000 psi (**2,500 bar**). In addition, also a Sour Gas gauge valve series is available up to 22,500 psi (**1,550 bar**) with 1/4", 3/8" and 9/16" connections.

Bleed Valves

Maximator series BV bleed valves are designed for reliable pressure bleed service up to 36,000 psi (**2,500 bar**)*. They have a 1/8" NPT outlet connection and are easy to install due to their one piece hex construction.

In addition, also a Sour Gas bleed valve series is available up to 22,500 psi (**1,550 bar**).

* Rating shown is in closed position. Rating @ 10,000 psi (690 bar) in open position.

Block and Bleed Valves

Maximator series BB block and bleed valves with metal to metal seats have a high level of safety and reliability under adverse operating conditions. Block and bleed valves are two stem manifold valves designed for blocking, bleeding and calibrating of pressure gauges and transmitters up to 22,500 psi (**1,550 bar**).

Due to the mini valve packing and stem design Maximator block and bleed valves are very compact and easy to use. In addition, manifold style valves reduce the number of fittings and space required for installation.

Swivel Joints

Maximator Swivel Joints are special connections which offer a great flexibility to high pressure systems. This kind of joints have been designed for 3D cutting heads of water jet cutting machines. The series of swivel joints is available as high pressure range up to 65,000 psi (4,500 bar) with 4H or 6H connection and comprises 90° versions with 1 or 2 axis as well as a 180° version with 1 axis.

Hydraulic Valve Actuator

Compared to the pneumatic actuator for Maximator high pressure valves, the compact design of the hydraulic actuator and its low weight should be highlighted. The hydraulic actuator for Maximator valves can be used in a variety of applications. In addition to its use in test applications, applications in combination with Maximator hydraulic boosters should be mentioned. The hydraulic actuator can be operated with up to 200 bars and is designed for temperatures from -55 °C to +100 °C.

Safety and shut-off manifold

Maximator safety and shut-off manifold are designed for up to 1.050 bar. This safety and shut-off block are designed to be installed on the fluid side of a hydraulic accumulator in the oil and gas industry.

It provides convenient separation of accumulator and system relieves the tank and, thanks to the installed pressure limitation valve, safeguards the accumulator on the fluid side.

Material: high strength stainless steel

Pressure limitation valve: up to 1.050 bar, nominal size of 8 mm

Customized Solutions

Sampling Bottle Valves

Maximator Sampling Bottle valves are 3-Way / 1 on pressure Needle valves.

This series combines the excellent performance, corrosion resistance and great durability of the standard Maximator Needle Valves with a smart design, to be used on sample bottles and cylinders for remote sampling in the oil industry.

Manifold Valves

Maximator Manifold Valves minimize space requirements and reduce the installation time necessary to assemble a pressure system. In addition, by reducing the number of components used in a system, manifold valves also reduce the number of potential leak joints. Maximator will design and build manifold valves to meet specific installation, layout, and pressure requirements.

These manifold valves are available in a variety of materials and sizes. Among the pressure connections that can be incorporated are Maximator Medium Pressure, High Pressure, Ultra High Pressure as well as NPT, BSP and others. These manifold valves are appropriate wherever pressure tubing systems are utilized.

Certification, Material Traceability and Custom Test Requirements

Maximator Valves, Fittings and Tubing are designed in conformity with the EC Pressure Equipment Directive 97/23/EC (PED) Module A and are marked with CE. Other standards, e.g. API or ASME can be applied up on request. Certificates (Declaration of manufacturer, ATEX, etc.) for all Products are readily available.

Maximator also realises a wide number of customizations like special materials (e.g. special alloy with high molybdenum content, nickel-based alloy), Positive Material Identification Tests (PMI), as well as special test requirements.

Products for Sour
Gas Applications
Pipe Valves
to 15,200 psi (1,050 bar)

Adapters and
Couplings
Medium Pressure
to 22,500 psi (1,550 bar)

Accessories
High Pressure
to 65,000 psi (4,500 bar)

Tools
Ultra High Pressure
to 152,000 psi (10,500 bar)

Solutions
Ball Valves
to 21,000 psi (1,500 bar)

Compact Air Actuated Needle Valves

Air actuated Valves are a great option for process automation, pressure control or safety devices in high pressure test and production systems. Maximator developed a special series of compact air actuated needle valves, which offer a high performance but require less than 60% of space in high pressure systems compared with standard air actuated yoke-type needle valves.

All valves of this compact air actuated needle valves series are available as „normally open“ and „normally closed“ version and offer a 2 mm orifice. This valves are available for the 15,200 psi (**1.050 bar**) and 22,500 psi (**1.550 bar**) pressure range with various connections. Please consult factory for further information.

Special Check Valve Designs for critical fluids or heavy duty applications

Maximator offers a wide range of check valves, which offer a great performance for most of the common liquid and gas applications in various industries.

Especially for applications, where best of class sealing ability is required, e.g. Hydrogen service, Maximator developed a new cone check valve design with a highly media compatible soft sealing system and improved spring guide. This series is available for Medium Pressure applications up to 22,500 psi (**1.550 bar**) with 4M to 9M connection.

For heavy duty applications Maximator has developed an additional version of their ball check valve with a special ceramic ball. This check valve series is available for 65,000 psi (**4.500 bar**) with 4H connections. Please contact factory for further order information.
